</table>
This introduction is intended to highlight some areas of the 2010 Formula SAE Rules that you may find of interest. With a few exceptions the changes to the 2010 Rules are either clarifications of existing rules or the codification of the established procedures. The changes implemented for 2010 are noted in *italics* and should not have a significant impact on your design.

**Caution** – Neither this Introduction nor any Summary of the Rules or of Changes to the Rules is a substitute for thoroughly reading and understanding the Rules.

**B3.3.1 Baseline Steel Material – Expanded** – Square tubing has been added to the list of baseline steel material.

**B3.12.7 Main Hoop Bracing – Clarified** – Must have triangulated load path back to bottom of Main Hoop.

**B3.20.4 Impact Attenuator Anti-Intrusion Plate – Clarified** – To simplify this requirement anti-intrusion plates are now required on ALL cars.

**B3.26 – 3.36 Monocoque Requirements – Rearranged and Clarified** – The requirements for monocoques have been grouped together and certain specifications have been clarified.

**B3.28 Monocoque Laminate Testing and B3.31 Monocoque Side Impact – Requirements Clarified** – The laminate tests that teams building monocoques need to conduct to support their SEF submissions have been specified.

**B3.9.5 “Percy”, B4.1 and B4.2 Templates – Reminder** – Please keep in mind that starting with the 2010 competitions, compliance with the Rules B3.9.5 “Percy”, and B4.1 and B4.2 Templates is Pass-Fail. Vehicles must pass “Percy” and both template tests in order to pass inspection and be permitted to operate under power. The 35 point penalty for not passing these tests was only in effect for the 2009 competitions and no longer applies.

**B4.3.2 Driver’s Seat – Requirement Specified** – The combination of the seat and firewall must be such that it prevents the driver from coming in contact with any surface that might be heated to a surface temperature above 60° C during normal operation of the vehicle.

**B5.1 – B5.5 Belts – Revised** – Lap belts must have a “quick adjust” feature. Vehicles in which the driver’s seat is reclined at more than 30° from the vertical will be required to use either 6 or 7 point harnesses. Five point harnesses can no longer be used by reclined drivers. Belt mounting requirements have been added.

**B8.3 Starters and D11.8 Starting – Clarification** – These rules have been revised to make it clear that cars may not be push started. Push starting was never mentioned in the Rules and whether or not a team was allowed to push start their car at a given event seemed to depend on which official was asked for permission. This makes it clear that you cannot push start your car.

**B9.1 Fuel – Available Fuel Types** – Although 93 octane (R+M)/2 gasoline has traditionally been supplied as the basic FSAE fuel, change in availability and local environmental regulations may require other fuels to be substituted. Rule B9.1 “Fuel” has been revised to allow such substitution. Based on the information we currently have available we anticipate that 91 and 100 octane (R+M)/2 gasoline will be provided at 2010 FSAE California.
B14 Fastener Requirements – Clarification - Button head cap screw manufacturers specifically state that these screws should not be used for critical applications and we are following their recommendation.

C3 Cost and Manufacturing Event – Reminder – The online cost tables continue to expand as we receive additional “add item” requests. The software has been improved and should allow the Cost Reports to be created entirely on-line. Check the FSAE Cost Event website throughout the year for details and updates.

D8.19.2 Endurance Scoring – Scoring Change – Tmax for Endurance has been increased from 1.33 times Tmin to 1.45.

D8.22 Fuel Economy Scoring – Scoring Change – Please note that the Fuel Economy scoring formula has been changed.

Note: To facilitate your reference the rules revisions for 2010 to Part “technical Requirements” appear in Italics.

The italicized rule sections are provided for the convenience of the reader. Italicized rules have no greater or lesser importance than any other rules.
ARTICLE 1:  FORMULA SAE OVERVIEW AND COMPETITION

A1.1  Formula SAE Competition Objective
The Formula SAE ® Series competitions challenge teams of university undergraduate and graduate students to conceive, design, fabricate and compete with small, formula style, autocross vehicles.

A1.1.1  To give teams the maximum design flexibility and the freedom to express their creativity and imaginations there are very few restrictions on the overall vehicle design. The challenge to teams is to develop a vehicle that can successfully compete in all the events described in the FSAE Rules. The competitions themselves give teams the chance to demonstrate and prove both their creativity and their engineering skills in comparison to teams from other universities around the world.

A1.2  Vehicle Design Objectives
For the purpose of the Formula SAE competition, teams are to assume that they work for a design firm that is designing, fabricating, testing and demonstrating a prototype vehicle for the non-professional, weekend, competition market.

A1.2.1  The vehicle should have very high performance in terms of acceleration, braking and handling and be sufficiently durable to successfully complete all the events described in the Formula SAE Rules and held at the Formula SAE competitions.

A1.2.2  The vehicle must accommodate drivers whose stature ranges from 5th percentile female to 95th percentile male and must satisfy the requirements of the Formula SAE Rules.

A1.2.3  Additional design factors to be considered include: aesthetics, cost, ergonomics, maintainability, manufacturability, and reliability.

A1.2.4  Once the vehicle has been completed and tested, your design firm will attempt to “sell” the design to a “corporation” that is considering the production of a competition vehicle. The challenge to the design team is to develop a prototype car that best meets the FSAE vehicle design goals and which can be profitably marketed.

A1.2.5  Each design will be judged and evaluated against other competing designs to determine the best overall car.

A1.3  Good Engineering Practices
Vehicles entered into Formula SAE competitions are expected to be designed and fabricated in accordance with good engineering practices.

A1.4  Judging Categories
The cars are judged in a series of static and dynamic events including: technical inspection, cost, presentation, and engineering design, solo performance trials, and high performance track endurance.
A1.4.1 The dynamic events are scored to determine how well the car performs. Each dynamic event has specified minimum acceptable performance levels that are reflected in the scoring equations.

The following points are possible:

Static Events:

- Presentation: 75
- Engineering Design: 150
- Cost Analysis: 100

Dynamic Events:

- Acceleration: 75
- Skid-Pad: 50
- Autocross: 150
- Fuel Economy: 100
- Endurance: 300

Total Points: 1,000

ARTICLE 2: THE 2010 FORMULA SAE SERIES

A2.1 The 2010 Formula SAE Competition Series consists of the following six (6) competitions:
1. Formula SAE Michigan held in Michigan, USA and organized by SAE
2. Formula SAE California held in California, USA and organized by SAE
3. Formula SAE Australasia held in Australia and organized by SAE Australasia
4. Formula SAE Brazil held in Brazil and organized by SAE Brazil
5. Formula SAE Italy held in Italy and organized by ATA
6. Formula Student held in the United Kingdom and organized by IMechE

A2.2 Open Registration
All Formula SAE competitions have open registration policies and accept registrations by student teams representing universities in any country.

A2.3 Rule Variations
Formula SAE Australasia, Formula SAE BRASIL, Formula SAE Italy and Formula Student may post some minor rule variations specific to the operation of the events in their countries. However, the vehicle design requirements and restrictions will remain unchanged. Any rule variations will be posted on the websites specific to those competitions.

A2.4 Official Announcements and Competition Information
Teams are required to read the published announcements by SAE and the other organizing bodies and to be familiar with all official announcements concerning the competitions and rules interpretations released by the FSAE Rules Committee.

A2.4.1 Formula SAE news is published online and can be found at:
http://students.sae.org/competitions/formulaseries/

A2.5 Official Languages
The official language of the Formula SAE series is English. Document submissions, presentations and discussions in English are acceptable at all competitions in the series.
A2.5.1 Team members, judges, and officials at FSAE Brazil and FSAE Italy may use their respective national languages for document submissions, presentations and discussions if all the parties involved agree to the use of that language.

A2.5.2 The languages in use at the competitions of Formula SAE series are:

- Formula SAE Michigan - English
- Formula SAE California - English
- Formula SAE Australasia - English
- Formula SAE Brazil - Portuguese and English
- Formula SAE Italy - Italian and English
- Formula Student - English

A2.6 Competition Codes

The competition codes that must be used as part of the file names of the various documents and data that are required to be submitted electronically are:

- Formula SAE Michigan - FSAEM
- Formula SAE California - FSAEC
- Formula SAE Australasia - FSAEA
- Formula SAE Brazil - FSAEB
- Formula SAE Italy - FSAEI
- Formula Student – FS

ARTICLE 3: FORMULA SAE RULES AND ORGANIZER AUTHORITY

A3.1 Rules Authority

The Formula SAE Rules are the responsibility of the Formula SAE Rules Committee and are issued under the authority of the SAE University Programs Committee.

A3.1.1 Official announcements from the Formula SAE Rules Committee, SAE or the other Formula SAE organizing bodies shall be considered part of, and shall have the same validity as, these rules.

A3.1.2 Ambiguities or questions concerning the meaning or intent of these rules will be resolved by the Formula SAE Rules Committee, SAE or by the individual competition organizers as appropriate.

A3.2 Rules Validity

The Formula SAE Rules posted on the SAE website and dated for the calendar year of the competition are the rules in effect for the competition.

A3.2.1 Rule sets dated for other years are invalid.

A3.3 Rules Compliance

By entering a Formula SAE competition the team, members of the team as individuals, faculty advisors and other personnel of the entering university agree to comply with, and be bound by, these rules and all rule interpretations or procedures issued or announced by SAE, the Formula SAE Rules Committee and the other organizing bodies.

A3.3.1 All team members, faculty advisors and other university representatives are required to cooperate with, and follow all instructions from, competition organizers, officials and judges.
A3.4 Understanding the Rules
Teams, team members as individuals and faculty advisors, are responsible for reading and understanding the rules in effect for the competition in which they are participating.

A3.5 Participating in the Competition
Teams, team members as individuals, faculty advisors and other representatives of a registered university who are present on-site at a competition are considered to be “participating in the competition” from the time they arrive at the event site until they depart the site at the conclusion of the competition or earlier by withdrawing.

A3.6 Violations on Intent
The violation of intent of a rule will be considered a violation of the rule itself.

A3.6.1 Questions about the intent or meaning of a rule may be addressed to the Formula SAE Rules Committee or by the individual competition organizers as appropriate. (See Rule A-8)

A3.7 Right to Impound
SAE and other competition organizing bodies reserve the right to impound any onsite registered vehicles at any time during a competition for inspection and examination by the organizers, officials and technical inspectors.

A3.8 Headings
The article, section and paragraph headings in these rules are provided only to facilitate reading: they do not affect the paragraph contents.

A3.9 General Authority
SAE and the competition organizing bodies reserve the right to revise the schedule of any competition and/or interpret or modify the competition rules at any time and in any manner that is, in their sole judgment, required for the efficient operation of the event or the Formula SAE series as a whole.

ARTICLE 4: INDIVIDUAL PARTICIPATION REQUIREMENTS

A4.1 Eligibility Limits
Eligibility is limited to undergraduate and graduate students to insure that this is an engineering design competition.

A4.2 Student Status
Team members must be enrolled as degree seeking undergraduate or graduate students in a college or university. Team members who have graduated during the seven (7) month period prior to the competition remain eligible to participate.

A4.3 Society Membership
Team members must be members of at least one of the following societies: (1) SAE International, (2) SAE Australasia, (3) SAE Brazil, (4) ATA or (5) IMechE. Proof of membership, such as membership card, is required at the competition.

Note: Students can join SAE online at: www.sae.org/students

© 2009 SAE International. All Rights Reserved. Printed in USA. 2010 Formula SAE Rules
A4.4 **Age**
Team members must be at least eighteen (18) years of age.

A4.5 **Driver’s License**
Team members who will drive a competition vehicle at any time during a competition must hold a valid, government issued driver’s license.

A4.6 **Liability Waiver**
All on-site participants, including students, faculty and volunteers, are required to sign a liability waiver upon registering on-site.

A4.7 **Medical Insurance**
Individual medical insurance coverage is required and is the sole responsibility of the participant.

A4.8 **Individual Registration Requirements for North American Competitions – ACTION REQUIRED**

A4.8.1 All students and faculty, both domestic and international, if you have an SAE International membership, make sure you are affiliated to your respective school/college/university on the SAE website under your “MySAE”.

A4.8.2 If you are not a member of SAE International or other approved societies, you will need to join SAE International online at www.sae.org. Select the “Join SAE / Membership Renewal” link under “Quicklinks”, and then select the “Join SAE” link under “Join SAE International”. Students will need to select the “Student Membership” link and then follow the series of the questions that are asked. Faculty that wishes to be SAE members should choose the “Professional Membership” link and proceed to the series of questions. Please note all student participants must be SAE International members to participate in the event. It is not mandatory for faculty to join.

A4.8.3 All international student participants (or unaffiliated faculty advisors) who are not SAE International members are required to complete the International Student Registration form for the entire team found in the specific event registration webpage. Upon completion, email the form to CollegiateCompetitions@sae.org stating which event and university name.

A4.8.4 **Online registration information is required!** Every participant, including advisors must affiliate themselves and complete the following information on under the team’s registration page on the SAE website:

- Medical insurance (provider, policy/ID number, telephone number)
- Driver’s license (state/country, ID number)
- Emergency contact data (point of contact (parent/guardian, spouse), relationship, and phone number)

To do this you will need to go to “Registration” page under the specific event the team is registered and then click on the “Register Your Team / Update Team Information” link. At this point, if you are properly affiliated to the school/college/university, a link will appear with your team name to select. Once you have selected the link, the registration page will appear. Selecting the “Add New Member” button will allow individuals to include themselves with the rest of the team. This can also be completed by team captain and faculty advisor for all team members.

PLEASE BRING YOUR OFFICIAL DRIVER’S LICENSE OR PASSPORT TO ONSITE REGISTRATION. ALSO PLEASE BRING YOUR MEDICAL INSURANCE CARD.
All students, both domestic and international, must affiliate themselves online or submit the International Student Registration form by March 2, 2010. For additional assistance, please contact CollegiateCompetitions@sae.org.

ARTICLE 5: FACULTY ADVISOR

A5.1 Status
Each team is expected to have a Faculty Advisor appointed by the university. The Faculty Advisor is expected to accompany the team to the competition and will be considered by competition officials to be the official university representative.

A5.2 Responsibilities
Faculty Advisors may advise their teams on general engineering and engineering project management theory.

A5.3 Limitations
Faculty Advisors may not design any part of the vehicle nor directly participate in the development of any documentation or presentation.

Additionally, Faculty Advisors may not fabricate nor assemble any components nor assist in the preparation, maintenance, testing or operation of the vehicle.

In Brief – Faculty Advisors may not design, build or repair any part of the car.

ARTICLE 6: VEHICLE ELIGIBILITY

A6.1 Student Developed Vehicle
Vehicles entered into Formula SAE competitions must be conceived, designed, fabricated and maintained by the student team members without direct involvement from professional engineers, automotive engineers, racers, machinists or related professionals.

A6.2 Information Sources
The student team may use any literature or knowledge related to car design and information from professionals or from academics as long as the information is given as a discussion of alternatives with their pros and cons.

A6.3 Professional Assistance
Professionals may not make design decisions or drawings and the Faculty Advisor may be required to sign a statement of compliance with this restriction.

A6.4 Student Fabrication
It is the intent of the SAE Collegiate Design Series competitions to provide direct hands-on experience to the students. Therefore, students should perform all fabrication tasks whenever possible.

A6.5 The Formula SAE Competition Year – First Year Cars
For the purpose of defining first, second and third year cars, a competition “year” is any consecutive run of the Series, i.e. Formula SAE Michigan, Formula SAE California, Formula Student, Formula SAE Italy, Formula SAE BRASIL, and Formula SAE Australasia held within a roughly 12 month
period counting from the event in which a vehicle first competes. For example, a car that competes first in Formula SAE Australasia is classified as a “first year car” until the following year’s Formula SAE Australasia competition.

Note: Teams are reminded that their vehicles must comply with the rules in effect for each competition they enter.

A6.6 First Year Vehicles – North American Formula SAE Competitions
A6.6.1 Only first year vehicles may enter the Formula SAE Competitions in North America.
A6.6.2 To be classified as a “first year vehicle” a car must, as a minimum, have a completely new frame. Photographic or other evidence will be used to determine if the frame is new.
A6.6.3 If there is any question about whether or not the car is in fact a first year vehicle, it will be the sole responsibility of the team to produce such evidence as the organizers or judges may require.

A6.7 Second Year Vehicles – North American Formula SAE Competitions
Vehicles that have competed during any previous Formula SAE year are prohibited from Formula SAE competitions held in North America.

A6.8 First Year Vehicles: FSAE-A, FSAE-B, FSAE-I and Formula Student
A6.8.1 To be classified as a “first year vehicle” a car must, as a minimum, have a completely new frame. Photographic or other evidence will be used to determine if the frame is new.
A6.8.2 If there are any questions about whether or not the car is in fact a first year vehicle, it will be the sole responsibility of the team to produce such evidence as the organizers or judges may require.

A6.9 Second Year Vehicles: FSAE-A and FSAE-B
A6.9.1 Vehicles that have competed during any one (1) previous Formula SAE year may compete provided that they have been substantially modified from their first appearance. Photographic and design documentation detailing the modifications are required along with a statement from the team’s Faculty Advisor.
A6.9.2 Penalties for insufficient redesign or insufficient knowledge by the team will be applied during the Design Event. Refer to the Rule C - 5.15 “Penalties for Insufficient Redesign”.

A6.10 Third Year Vehicles –Prohibited
A6.10.1 Vehicles that have competed in any two (2) previous Formula SAE years are prohibited from participating in any Formula SAE competition.
A6.10.2 Any team found to have entered a vehicle that contravenes this rule will be disqualified. Additionally, the team will be required to submit such documentation as the organizers may require in advance of the acceptance of any future registration.

ARTICLE 7: REGISTRATION

A7.1 Registration – North American Formula SAE Competitions
Registration for Formula SAE competitions held in North America must be completed on-line. Online registration must be done by either (a) an SAE member or (b) the official faculty advisor connected with the registering university and recorded as such in the SAE record system.
Note: It typically takes at least 1 working day between the time you complete an on-line SAE membership application and our system recognizes you as eligible to register your team.

A7.2 Entries per University – North American Formula SAE Competitions – One per Competition
Registration for Formula SAE competitions held in North America is limited to one (1) vehicle per university per competition depending on available space.

A7.3 Registration Limits - North American Formula SAE Competitions
Registration for the North American Formula SAE competitions is limited as follows:

<table>
<thead>
<tr>
<th>Competition</th>
<th>Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Formula SAE Michigan</td>
<td>120 teams</td>
</tr>
<tr>
<td>Formula SAE California</td>
<td>80 teams</td>
</tr>
</tbody>
</table>

Registration for each FSAE competitions closes as soon as the registration limit is reached. We strongly advise teams to register as soon as registration opens.

A7.4 Registration Dates – North American Formula SAE Competitions
Registration for the North American Formula SAE competitions will open at 10:00 am EDT, Monday, October 5, 2009.

For the first month of the registration period a team may enter either FSAE Michigan or FSAE California, but not both.

Specifically, from 10:00 am EDT, Monday, October 5, 2009 until 10:00 am EST, Thursday, November 5, 2009, teams may register for either Formula SAE Michigan or Formula SAE California. After the first month of registration any untaken slots at any of the competitions will be available to any team on a first come, first serve basis.

Specifically from 10:00 am EST, Thursday, November 5, 2009, until the close of registration at 11:59 pm Monday, December 21, 2009 teams may register for any competition in which registration slots are available.

Registration for the North American Formula SAE competitions will close at 11:59 pm EST Monday, December 21, 2009 or when all the registration slots have been taken, whichever occurs first.

There is no late registration and there are no exceptions to this registration policy.

A7.5 Formula SAE Australia, Formula SAE Brazil, Formula SAE Italy, and Formula Student

Note: Check the individual competition websites for exact registration requirements, applicable to those events.

A7.6 Registration Fees
A7.6.1 Registration fees must be paid to the organizer by the deadline specified on the respective competition website.

A7.6.2 Registration fees are not refundable.
A7.7 Withdrawals
A7.7.1 Registered teams that find that they will not be able to attend the competition are requested to officially withdraw by notifying the following no later than one (1) week before the event:

A7.7.2 Formula SAE North American Event withdrawals: Kaley Zundel, kzundel@sae.org

A7.7.3 For events outside North America, please visit the respective competition website for contact information.

A7.8 United States Visas
Teams requiring visas to enter to the United States are advised to apply at least sixty (60) days prior to the competition. Although most visa applications seem to go through without an unreasonable delay, occasionally teams have had difficulties and in several instances visas were not issued before the competition.

Don’t wait – apply early for your visa.

Neither SAE staff nor any competition organizers are permitted to give advice on visas, customs regulations or vehicle shipping regulations concerning the United States or any other country.

A7.9 Vehicle Shipping
Vehicle shipments by commercial carrier must comply with the laws and regulations of nations from which, and to which, the car is being sent. Teams are advised to consult with their shipping company or freight forwarder to be sure their shipment fully complies with all relevant, customs, import/export and aviation shipping requirements.

Shipments must be sent with the sending team or university listed as the receiving party. Neither the competition organizers nor the competition sites can be listed as the receiving party.

Vehicle shipping procedures for the North American competitions are published on the Formula SAE website for each event and are incorporated into these Rules by reference.

A7.10 On-site Registration
All team members and faculty advisors must complete the on-site registration procedures immediately after they arrive at the competition site.

On-site registration must be completed and the credentials and/or other identification issued by the organizers properly worn before the car can be unloaded, uncrated or worked upon in any manner.

ARTICLE 8: Questions About the Formula SAE Rules

A8.1 Question Publication
By submitting a question to the FSAE Rules Committee you and your team agree that both your question and the Committee’s answer can be reproduced and distributed by SAE, in both complete and edited versions, in any medium or format anywhere in the world.

A8.2 Question Types
The Committee will answer questions that are not already answered in the rules or FAQs or that require new or novel rule interpretations. The Committee will not respond to questions that are
already answered in the rules. For example, if a rule specifies a minimum dimension for a part the Committee will not answer questions asking if a smaller dimension can be used.

A8.3 Question Submission
An electronic question submission system is being developed for the North American competitions. Until that system is ready for use questions should be submitted following the traditional procedure covered by rules A8.5 through A8.7.

When the electronic submission system is ready for use an announcement will be made on the FSAE news page. Please watch for announcements.

Throughout the 2010 FSAE competition season questions can still be submitted by the traditional submission procedure found in Rules A8.3 through A8.7. However, once the electronic submission system becomes operational the Committee may choose to respond using that system.

A8.4 Frequently Asked Questions
Before submitting a question, check the Frequently Asked Questions section of the Formula SAE Forum website.

A8.5 Question Format
A8.5.1 All rules questions must include (1) the full name and email address of the student submitting the question, (2) the name of the university – no abbreviations – and (3) the number of the applicable rule.

A8.5.2 The following limits apply to questions submitted to the FSAE Rules Committee (1) No photograph, drawing or other attachment may exceed 100 KB in size (2) the total size of any question, with all attachments, must not exceed 1MB.

A8.6 Response Time
A8.6.1 Please allow a minimum of two (2) weeks for a response. The Rules Committee will respond as quickly as possible, however responses to questions presenting new issues, or of unusual complexity, may take more than two weeks.

A8.6.2 Please do not resend questions.

A8.7 Submission Addresses:
A8.7.1 Teams entering Formula SAE competitions in North America
Send questions to: Kathleen McDonald, Formula SAE Consultant
Email: katklauz@aol.com

A8.7.2 Teams entering only Formula SAE-Australasia:
Send questions to: SAE-A Organizers
Email: formulasae@sae-a.com.au

A8.7.3 Teams entering only Formula SAE Brazil:
Send questions to: SAE Brazil Organizers
Email: formula.saebrasil@saebrasil.org.br

A8.7.4 Teams entering only Formula SAE Italy:
Send questions to: Roberta Reggiani, Formula SAE Italy Manager,
Email: Roberta.reggiani@crf.it
A8.7.5 Teams entering only Formula Student:
Send questions to: IMechE Organizers
Email: formulastudent@imeche.org.uk
ARTICLE 1: VEHICLE REQUIREMENTS & RESTRICTIONS

B1.1 Technical Inspection
The following requirements and restrictions will be enforced through technical inspection. Noncompliance must be corrected and the car re-inspected before the car is allowed to operate under power.

B1.2 Modifications and Repairs
B1.2.1 Once the vehicle has been presented for judging in the Cost or Design Events, or submitted for Technical Inspection, and until the vehicle is approved to compete in the dynamic events, i.e. all the inspection stickers are awarded, the only modifications permitted to the vehicle are those directed by the Inspector(s) and noted on the Inspection Form.

B1.2.2 Once the vehicle is approved to compete in the dynamic events, the ONLY modifications permitted to the vehicle are those listed below. They are also referenced in Part C of the Formula SAE Rules – Static Event Regulations.
   a. Adjustment of belts, chains and clutches
   b. Adjustment of brake bias
   c. Adjustment of the driver restraint system, head restraint, seat and pedal assembly
   d. Substitution of the head restraint or seat insert for different drivers
   e. Adjustment to engine operating parameters, e.g. fuel mixture and ignition timing
   f. Adjustment of mirrors
   g. Adjustment of the suspension where no part substitution is required, (except that springs, sway bars and shims may be changed)
   h. Adjustment of tire pressure
   i. Adjustment of wing angle, but not the location
   j. Replenishment of fluids
   k. Replacement of worn tires or brake pads
   l. The changing of wheels and tires for “wet” or “damp” conditions as allowed in Part D of the FSAE Rules – Dynamic Event Regulations.

B1.2.3 The vehicle must maintain all required specifications, e.g. ride height, suspension travel, braking capacity, sound level and wing location throughout the competition.

B1.2.4 Once the vehicle is approved for competition, any damage to the vehicle that requires repair, e.g. crash damage, electrical or mechanical damage will void the Inspection Approval. Upon the completion of the repair and before re-entering into any dynamic competition, the vehicle MUST be re-submitted to Technical Inspection for re-approval.

ARTICLE 2: GENERAL DESIGN REQUIREMENTS

B2.1 Vehicle Configuration
The vehicle must be open-wheeled and open-cockpit (a formula style body) with four (4) wheels that are not in a straight line.
B2.2 Bodywork
There must be no openings through the bodywork into the driver compartment from the front of the vehicle back to the roll bar main hoop or firewall other than that required for the cockpit opening. Minimal openings around the front suspension components are allowed.

B2.3 Wheelbase
The car must have a wheelbase of at least 1525 mm (60 inches). The wheelbase is measured from the center of ground contact of the front and rear tires with the wheels pointed straight ahead.

B2.4 Vehicle Track
The smaller track of the vehicle (front or rear) must be no less than 75% of the larger track.

B2.5 Visible Access
All items on the Inspection Form must be clearly visible to the technical inspectors without using instruments such as endoscopes or mirrors. Visible access can be provided by removing body panels or by providing removable access panels.

ARTICLE 3: DRIVER’S CELL

B3.1 General Requirements
Among other requirements, the vehicle’s structure must include two roll hoops that are braced, a front bulkhead with support system and Impact Attenuator, and side impact structures.

B3.2 Definitions
The following definitions apply throughout the Rules document:
- Main Hoop - A roll bar located alongside or just behind the driver’s torso.
- Front Hoop - A roll bar located above the driver’s legs, in proximity to the steering wheel.
- Roll Hoops – Both the Front Hoop and the Main Hoop are classified as “Roll Hoops”
- Roll Hoop Bracing Supports – The structure from the lower end of the Roll Hoop Bracing back to the Roll Hoop(s).
- Frame Member - A minimum representative single piece of uncut, continuous tubing.
- Frame - The “Frame” is the fabricated structural assembly that supports all functional vehicle systems. This assembly may be a single welded structure, multiple welded structures or a combination of composite and welded structures.
- Primary Structure – The Primary Structure is comprised of the following Frame components: 1) Main Hoop, 2) Front Hoop, 3) Roll Hoop Braces and Supports, 4) Side Impact Structure, 5) Front Bulkhead, 6) Front Bulkhead Support System and 7) all Frame Members, guides and supports that transfer load from the Driver’s Restraint System into items 1 through 6.
- Major Structure of the Frame – The portion of the Frame that lies within the envelope defined by the Primary Structure. The upper portion of the Main Hoop and the Main Hoop Bracing are not included in defining this envelope.
- Front Bulkhead – A planar structure that defines the forward plane of the Major Structure of the Frame and functions to provide protection for the driver’s feet.
- Impact Attenuator – A deformable, energy absorbing device located forward of the Front Bulkhead.
- Side Impact Zone – The area of the side of the car extending from the top of the floor to 350 mm (13.8 inches) above the ground and from the Front Hoop back to the Main Hoop.
B3.3 Minimum Material Requirements
B3.3.1 Baseline Steel Material
The Primary Structure of the car must be constructed of:
- Either: Round, mild or alloy, steel tubing (minimum 0.1% carbon) of the minimum dimensions specified in the following table,
- Or: Approved alternatives per Rules B.3.4, B.3.5, B.3.6 and B.3.7.

<table>
<thead>
<tr>
<th>ITEM or APPLICATION</th>
<th>OUTSIDE DIMENSION X WALL THICKNESS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Main &amp; Front Hoops, Shoulder Harness Mounting Bar</td>
<td>Round 1.0 inch (25.4 mm) x 0.095 inch (2.4 mm) or Round 25.0 mm x 2.50 mm metric</td>
</tr>
<tr>
<td>Side Impact Structure, Front Bulkhead, Roll Hoop Bracing, Driver’s Restraint Harness Attachment (except as noted above)</td>
<td>Round 1.0 inch (25.4 mm) x 0.065 inch (1.65 mm) or Round 25.0 mm x 1.75 mm metric or Round 25.4 mm x 1.60 mm metric or Square 1.00 inch x 1.00 inch x 0.049 inch or Square 25.0 mm x 25.0 mm x 1.25 mm metric or Square 26.0 mm x 26.0 mm x 1.2 mm metric</td>
</tr>
<tr>
<td>Front Bulkhead Support, Main Hoop Bracing Supports</td>
<td>Round 1.0 inch (25.4 mm) x 0.049 inch (1.25 mm) or Round 25.0 mm x 1.5 mm metric or Round 26.0 mm x 1.2 mm metric</td>
</tr>
</tbody>
</table>

Note 1: The use of alloy steel does not allow the wall thickness to be thinner than that used for mild steel.

Note 2: For a specific application:
- Using tubing of the specified outside diameter but with greater wall thickness,
- OR of the specified wall thickness and a greater outside diameter,
- Or replacing round tubing with square tubing of the same or larger size to those listed above,

Are NOT rules deviation requiring approval.

Note 3: Except for the mandated inspection holes, any holes drilled in any regulated tubing require the submission of an SEF.

B3.4 Alternative Tubing and Material - General
B3.4.1 Alternative tubing geometry and/or materials may be used except that the Main Roll Hoop and Main Roll Hoop Bracing must be made from steel, i.e. the use of aluminum or titanium tubing or composites for these components is prohibited.

B3.4.2 Titanium tubing on which welding has been utilized cannot be used for any tubing in the Primary Structure. This includes the attachment of brackets to the tubing or the attachment of the tubing to other components.

B3.4.3 If a team chooses to use alternative tubing and/or materials they must submit a “Structural Equivalency Form” per Rule B.3.8. The teams must submit calculations for the material they have chosen, demonstrating equivalence to the minimum requirements found in Section B.3.3.1 for yield and ultimate strengths in bending, buckling and tension, for buckling modulus and for energy.
dissipation. (The Buckling Modulus is defined as EI, where, $E =$ modulus of Elasticity, and $I =$ area moment of inertia about the weakest axis.)

B3.4.4 Tubing cannot be of thinner wall thickness than listed in B.3.5 or B.3.6.

B3.5 Alternative Steel Tubing
Minimum Wall Thickness Allowed:

<table>
<thead>
<tr>
<th>MATERIAL &amp; APPLICATION</th>
<th>MINIMUM WALL THICKNESS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Steel Tubing for Front and Main Roll Hoops, and Shoulder Harness Mounting Bar</td>
<td>2.0 mm (0.079 inch)</td>
</tr>
<tr>
<td>Steel Tubing for Roll Hoop Bracing, Roll Hoop Bracing Supports, Side Impact Structure, Front Bulkhead, Front Bulkhead Support, and Driver’s Harness Attachment (except as noted above)</td>
<td>1.2 mm (0.047 inch)</td>
</tr>
</tbody>
</table>

Note 1: All steel is treated equally - there is no allowance for alloy steel tubing, e.g. SAE 4130, to have a thinner wall thickness than that used with mild steel.

Note 2: To maintain EI with a thinner wall thickness than specified in B.3.3.1, the outside diameter MUST be increased.

Note 3: To maintain the equivalent yield and ultimate tensile strength the same cross-sectional area of steel as the baseline tubing specified in B.3.3.1 MUST be maintained.

B3.6 Aluminum Tubing Requirements
B3.6.1 Minimum Wall Thickness: Aluminum Tubing 3.0 mm (0.118 inch)

B3.6.2 The equivalent yield strength must be considered in the “as-welded” condition, (Reference: WELDING ALUMINUM (latest Edition) by the Aluminum Association, or THE WELDING HANDBOOK, Vol . 4, 7th Ed., by The American Welding Society), unless the team demonstrates and shows proof that the frame has been properly solution heat treated and artificially aged.

B3.6.3 Should aluminum tubing be solution heat-treated and age hardened to increase its strength after welding; the team must supply sufficient documentation as to how the process was performed. This includes, but is not limited to, the heat-treating facility used, the process applied, and the fixturing used.

B3.7 Composite Materials
B3.7.1 If any composite or other material is used, the team must present documentation of material type, e.g. purchase receipt, shipping document or letter of donation, and of the material properties. Details of the composite lay-up technique as well as the structural material used (cloth type, weight, and resin type, number of layers, core material, and skin material if metal) must also be submitted. The team must submit calculations demonstrating equivalence of their composite structure to one of similar geometry made to the minimum requirements found in Section B.3.3.1. Equivalency calculations must be submitted for energy dissipation, yield and ultimate strengths in bending, buckling, and tension. Submit the completed “Structural Equivalency Form” per Section B.3.8.

B3.7.2 Composite materials are not allowed for the Main Hoop or the Front Hoop.
B3.8 Structural Equivalency and Structural Equivalency Form (SEF)

B3.8.1 ALL TEAMS MUST SUBMIT A STRUCTURAL EQUIVALENCY FORM (SEF), even if they are NOT planning to use alternative materials or tubing sizes to those specified in B.3.3.1 Baseline Steel Materials.

B3.8.2 The use of alternative materials or tubing sizes to those specified in B.3.3.1 “Baseline Steel Material,” is allowed, provided they have been judged by a technical review to have equal or superior properties to those specified in B.3.3.1.

B3.8.3 Approval of alternative material or tubing sizes will be based upon the engineering judgment and experience of the chief technical inspector or his appointee.

B3.8.4 The technical review is initiated by completing the “Structural Equivalency Form” (SEF) using the format given in Appendix B-1.

B3.8.5 Structural Equivalency Form – Submission
   a. Address – SEF’s must be submitted to the officials at the competition you are entering at the address shown in the Appendix or indicated at the competition website.
   b. Due Date – SEF’s must be submitted no later than the date given in the “Action Deadlines” indicated on the competition website. Teams that submit their Structural Equivalency Form after the due date for the competition will be penalized 10 points per day up to a maximum of 50 points, which will be taken off the team’s Total Score.
   c. Acknowledgement – North America competitions – SEF’s submitted for vehicles entered into competitions held in North America will be acknowledged upon receipt.

Do Not Resubmit SEF’s unless instructed to do so.

B3.8.6 Vehicles completed under an approved SEF must be fabricated in accordance with the materials and processes described in the SEF.

B3.8.7 Teams must bring a copy of the approved SEF with them to Technical Inspection.

B3.9 Main and Front Roll Hoops – General Requirements

B3.9.1 The driver’s head and hands must not contact the ground in any rollover attitude.

B3.9.2 The Frame must include both a Main Hoop and a Front Hoop as shown in Figure 1.

B3.9.3 When seated normally and restrained by the Driver’s Restraint System, the helmet of a 95th percentile male (anthropometrical data) and all of the team’s drivers must:
   a. Be a minimum of 50.8 mm (2 inches) from the straight line drawn from the top of the main hoop to the top of the front hoop. (Figure 1a)
   b. Be a minimum of 50.8 mm (2 inches) from the straight line drawn from the top of the main hoop to the lower end of the main hoop bracing if the bracing extends rearwards. (Figure 1b)
   c. Be no further rearwards than the rear surface of the main hoop if the main hoop bracing extends forwards. (Figure 1c)
95th Percentile Male Template Dimensions

A two dimensional template used to represent the 95th percentile male is made to the following dimensions:

- A circle of diameter 200 mm (7.87 inch) will represent the hips and buttocks.
- A circle of diameter 200 mm (7.87 inch) will represent the shoulder/cervical region.
- A circle of diameter 300 mm (11.81 inch) will represent the head (with helmet).
- A straight line measuring 490 mm (19.29 inch) will connect the centers of the two 200 mm circles.
- A straight line measuring 280 mm (11.02 inch) will connect the centers of the upper 200 mm circle and the 300 mm head circle.

B3.9.4 The 95th percentile male template will be positioned as follows: (See Figure 2.)

- The seat will be adjusted to the rearmost position,
- The bottom 200 mm circle will be placed at the junction of the seat back and the seat bottom, tangential to both.
- The middle 200 mm circle, representing the shoulders, will be positioned on the seat back.
- The upper 300 mm circle will be positioned no more than 25.4 mm (1 inch) away from the head restraint (i.e. where the driver's helmet would normally be located while driving).

B3.9.5 If the requirements of B.3.9.3 are not met with the 95th percentile male template, the car will NOT receive a Technical Inspection Sticker and will not be allowed to compete in the dynamic events.

B3.9.6 Drivers who do not meet the helmet clearance requirements of B.3.9.3 will not be allowed to drive in the competition.

B3.9.7 The minimum radius of any bend, measured at the tube centerline, must be at least three times the tube outside diameter. Bends must be smooth and continuous with no evidence of crimping or wall failure.

B3.9.8 The Main Hoop and Front Hoop must be securely integrated into the Primary Structure using gussets and/or tube triangulation.

B3.10 Main Hoop

B3.10.1 The Main Hoop must be constructed of a single piece of uncut, continuous, closed section steel tubing per Rule B.3.3.1.

B3.10.2 The use of aluminum alloys, titanium alloys or composite materials for the Main Hoop is prohibited.

B3.10.3 The Main Hoop must extend from the lowest Frame Member on one side of the Frame, up, over and down the lowest Frame Member on the other side of the Frame.

B3.10.4 In the side view of the vehicle, the portion of the Main Roll Hoop that lies above its attachment point to the Major Structure of the Frame must be within ten degrees (10°) of the vertical.

B3.10.5 In the front view of the vehicle, the vertical members of the Main Hoop must be at least 380 mm (15 inch) apart (inside dimension) at the location where the Main Hoop is attached to the Major Structure of the Frame.
B3.11 Front Hoop

B3.11.1 The Front Hoop must be constructed of closed section metal tubing per Rule B.3.3.1.

B3.11.2 The Front Hoop must extend from the lowest Frame Member on one side of the Frame, up, over and down to the lowest Frame Member on the other side of the Frame.

B3.11.3 With proper gusseting and/or triangulation, it is permissible to fabricate the Front Hoop from more than one piece of tubing.

B3.11.4 The top-most surface of the Front Hoop must be no lower than the top of the steering wheel in any angular position.

B3.11.5 The Front Hoop must be no more than 250 mms (9.8 inches) forward of the steering wheel. This distance shall be measured horizontally, on the vehicle centerline, from the rear surface of the Front Hoop to the forward most surface of the steering wheel rim with the steering in the straight-ahead position.

B3.11.6 In side view, no part of the Front Hoop can be inclined at more than twenty degrees (20°) from the vertical.

B3.12 Main Hoop Bracing

B3.12.1 Main Hoop braces must be constructed of closed section steel tubing per Rule B.3.3.1.

B3.12.2 The use of aluminum alloys, titanium alloys or composite materials for the Main Hoop braces is prohibited.

B3.12.3 The Main Hoop must be supported by two braces extending in the forward or rearward direction on both the left and right sides of the Main Hoop.

B3.12.4 In the side view of the Frame, the Main Hoop and the Main Hoop braces must not lie on the same side of the vertical line through the top of the Main Hoop, i.e. if the Main Hoop leans forward, the braces must be forward of the Main Hoop, and if the Main Hoop leans rearward, the braces must be rearward of the Main Hoop.

B3.12.5 The Main Hoop braces must be attached as near as possible to the top of the Main Hoop but not more than 160 mm (6.3 in) below the top-most surface of the Main Hoop. The included angle formed by the Main Hoop and the Main Hoop braces must be at least thirty degrees (30°). See Figure 3.

B3.12.6 The Main Hoop braces must be straight, i.e. without any bends.

B3.12.7 The attachment of the Main Hoop braces must be capable of transmitting all loads from the Main Hoop into the Major Structure of the Frame without failing. From the lower end of the braces there must be a properly triangulated structure back to the lowest part of the Main Hoop. This structure must meet the minimum requirements for Main Hoop Bracing Supports (see Rule B.3.3) or an SEF approved alternative. Bracing loads must not be fed solely into the engine, transmission or differential, or through suspension components.

B3.12.8 If any item which is outside the envelope of the Primary Structure is attached to the Main Hoop braces, then additional bracing must be added to prevent bending loads in the braces in any rollover attitude.
B3.13 Front Hoop Bracing
B3.13.1 Front Hoop braces must be constructed of material per Rule B.3.3.1.

B3.13.2 The Front Hoop must be supported by two braces extending in the forward direction on both the left and right sides of the Front Hoop.

B3.13.3 The Front Hoop braces must be constructed such that they protect the driver’s legs and should extend to the structure in front of the driver's feet.

B3.13.4 The Front Hoop braces must be attached as near as possible to the top of the Front Hoop but not more than 50.8 mm (2 in) below the top-most surface of the Front Hoop. See Figure 3.

B3.13.5 If the Front Hoop leans rearwards by more than ten degrees (10°) from the vertical, it must be supported by additional bracing to the rear. This bracing must be constructed of material per Rule B.3.3.1.

B3.14 Other Bracing Requirements
Where the braces are not welded to steel Frame Members, the braces must be securely attached to the Frame using 8 mm Grade 8.8 (5/16 in Grade 5), or stronger, bolts. Mounting plates welded to the Roll Hoop braces must be at least 2.0 mm (0.080 in) thick steel.

B3.15 Other Side Tube Requirements
If there is a Roll Hoop brace or other frame tube alongside the driver, at the height of the neck of any of the team’s drivers, a metal tube or piece of sheet metal must be firmly attached to the Frame to prevent the drivers’ shoulders from passing under the roll hoop brace or frame tube, and his/her neck contacting this brace or tube.

B3.16 Mechanically Attached Roll Hoop Bracing
B3.16.1 Roll Hoop bracing may be mechanically attached.

B3.16.2 Any non-permanent joint at either end must be either a double-lug joint as shown in Figures 4 and 5, or a sleeved butt joint as shown in Figure 6.

B3.16.3 The threaded fasteners used to secure non-permanent joints are considered critical fasteners and must comply with Article B.14.

B3.16.4 No spherical rod ends are allowed.

B3.16.5 For double-lug joints, each lug must be at least 4.5 mm (0.177 in) thick steel, measure 25 mm (1.0 in) minimum perpendicular to the axis of the bracing and be as short as practical along the axis of the bracing.

B3.16.6 All double-lug joints, whether fitted at the top or bottom of the tube, must include a capping arrangement (Figures 4 & 5).

B3.16.7 In a double-lug joint the pin or bolt must be 10 mm Grade 9.8 (3/8 in. Grade 8) minimum. The attachment holes in the lugs and in the attached bracing must be a close fit with the pin or bolt.

B3.16.8 For sleeved butt joints (Figure 6), the sleeve must have a minimum length of 76 mm (3 inch), 38 mm (1.5 inch) either side of the joint, and be a close-fit around the base tubes. The wall thickness of the
sleeve must be at least that of the base tubes. The bolts must be 6 mm Grade 9.8 (1/4 inch Grade 8) minimum. The holes in the sleeves and tubes must be a close-fit with the bolts.

**B3.17 Frontal Impact Structure**

* B3.17.1 The driver’s feet must be completely contained within the Major Structure of the Frame. While the driver’s feet are touching the pedals, in side and front views no part of the driver’s feet can extend above or outside of the Major Structure of the Frame.

* B3.17.2 Forward of the Front Bulkhead must be an energy-absorbing Impact Attenuator.

**B3.18 Bulkhead**

* B3.18.1 The Front Bulkhead must be constructed of closed section tubing per Rule B.3.3.1.

* B3.18.2 *Except as allowed by B.3.22.2*, The Front Bulkhead must be located forward of all non-crushable objects, e.g. batteries, master cylinders, hydraulic reservoirs.

* B3.18.3 The Front Bulkhead must be located such that the soles of the driver’s feet, when touching but not applying the pedals, are rearward of the bulkhead plane. (This plane is defined by the forward-most surface of the tubing.) Adjustable pedals must be in the forward most position.

**B3.19 Front Bulkhead Support**

* B3.19.1 The Front Bulkhead must be securely integrated into the Frame.

* B3.19.2 The Front Bulkhead must be supported back to the Front Roll Hoop by a minimum of three (3) Frame Members on each side of the vehicle with one at the top (within 50.8 mm (2 inches) of its top-most surface), one (1) at the bottom, and one (1) as a diagonal brace to provide triangulation.

* B3.19.3 The triangulation must be node-to-node, with triangles being formed by the Front Bulkhead, the diagonal and one of the other two required Front Bulkhead Support Frame Members.

* B3.19.4 All the Frame Members of the Front Bulkhead Support system listed above must be constructed of closed section tubing per Section B.3.3.1.

**B3.20 Impact Attenuator**

* B3.20.1 The Impact Attenuator must be:
  a. Installed forward of the Front Bulkhead.
  b. At least 200 mm (7.8 in) long, with its length oriented along the fore/aft axis of the Frame.
  c. At least 100 mm (3.9 in) high and 200 mm (7.8 in) wide for a minimum distance of 200 mm (7.8 in) forward of the Front Bulkhead.
  d. Such that it cannot penetrate the Front Bulkhead in the event of an impact.
  e. Attached securely and directly to the Front Bulkhead and not by being part of non-structural bodywork.

* B3.20.2 The attachment of the Impact Attenuator must be constructed to provide an adequate load path for transverse and vertical loads in the event of off-center and off-axis impacts.

* B3.20.3 The attachment of the Impact Attenuator to a monocoque structure requires an approved “Structural Equivalency Form” per Article B.3.8 that shows equivalency to a minimum of four (4) 8 mm Grade 8.8 (5/16 inch Grade 5) bolts.
B3.20.4 On all cars, a 1.5 mm (0.060 in) solid steel or 4.0 mm (0.157 in) solid aluminum “anti-intrusion plate” must be integrated into the Impact Attenuator. If the IA plate is bolted to the Front Bulkhead, it must be the same size as the outside dimensions of the Front Bulkhead. If it is welded to the Front Bulkhead, it must extend at least to the centerline of the Front Bulkhead tubing.

B3.20.5 If the anti-intrusion is not integral with the frame, i.e. welded, a minimum of four (4) 8 mm Grade 8.8 (5/16 inch Grade 5) bolts must attach the Impact Attenuator to the Front Bulkhead.

B3.20.6 Alternative designs of the anti-intrusion plate required by B.3.20.4 that do not comply with the minimum specifications given above require an approved “Structural Equivalency Form” per Article B.3.8.

B3.21 Impact Attenuator Data Requirement

B3.21.1 The team must submit test data to show that their Impact Attenuator, when mounted on the front of a vehicle with a total mass of 300 kgs (661 lbs) and run into a solid, non-yielding impact barrier with a velocity of impact of 7.0 metres/second (23.0 ft/sec), would give an average deceleration of the vehicle not to exceed 20 g’s, with a peak deceleration less than or equal to 40 g’s.

B3.21.2 When using acceleration data, the average deceleration must be calculated based on the raw data. The peak deceleration can be assessed based on the raw data, and if peaks above the 40g limit are apparent in the data, it can then be filtered with a Channel Filter Class (CFC) 60 (100 Hz) filter per SAE Recommended Practice J211 “Instrumentation for Impact Test”, or a 100 Hz, 3rd order, lowpass Butterworth (-3dB at 100 Hz) filter.

B3.21.3 A schematic of the test method must be supplied along with photos of the attenuator before and after testing.

B3.21.4 The test piece must be presented at technical inspection for comparison to the photographs and the attenuator fitted to the vehicle.

B3.21.5 The test data and calculations must be submitted electronically in Adobe Acrobat ® format (*.pdf file) to the address and by the date provided in the Action Deadlines provided on the relevant competition website. This material must be a single file (text, drawings, data or whatever you are including).

B3.21.6 The Impact Attenuator Data must be named as follows: carnumber_schoolname_competition code_IAD.pdf using the assigned car number, the complete school name and competition code [Example: 087_University of SAE_FSAEM_IAD.pdf]

Competition Codes are listed in Rule A.2.6

B3.21.7 Teams that submit their Impact Attenuator Data Report after the due date will be penalized 10 points per day up to a maximum of 50 points, which will be taken off the team’s Total Score.

B3.21.8 Impact Attenuator Reports will be graded by the organizers and the grades will be passed to the Captain of the Design Event for consideration in that event.

B3.22 Non-Crushable Objects

B3.22.1 Except as allowed by B3.22.2, all non-crushable objects (e.g. batteries, master cylinders, hydraulic reservoirs) must be rearward of the bulkhead. No non-crushable objects are allowed in the impact attenuator zone.
B3.22.2 The front wing and wing supports may be forward of the Front Bulkhead, but may NOT be located in or pass through the Impact Attenuator. If the wing supports are in front of the Front Bulkhead, the supports must be included in the test of the Impact Attenuator for B.3.21.

B3.23 Front Bodywork
B3.23.1 Sharp edges on the forward facing bodywork or other protruding components are prohibited.

B3.23.2 All forward facing edges on the bodywork that could impact people, e.g. the nose, must have forward facing radii of at least 38 mm (1.5 inches). This minimum radius must extend to at least forty-five degrees (45°) relative to the forward direction, along the top, sides and bottom of all affected edges.

B3.24 Side Impact Structure for Tube Frame Cars
The Side Impact Structure must meet the requirements listed below.

B3.24.1 The Side Impact Structure for tube frame cars must be comprised of at least three (3) tubular members located on each side of the driver while seated in the normal driving position, as shown in Figure 7.

B3.24.2 The three (3) required tubular members must be constructed of material per Section B.3.3.1.

B3.24.3 The locations for the three (3) required tubular members are as follows:
- The upper Side Impact Structural member must connect the Main Hoop and the Front Hoop at a height between 300 mm (11.8 inch) and 350 mm (13.8 inch) above the ground with a 77kg (170 pound) driver seated in the normal driving position. The upper frame rail may be used as this member if it meets the height, diameter and thickness requirements.
- The lower Side Impact Structural member must connect the bottom of the Main Hoop and the bottom of the Front Hoop. The lower frame rail/frame member may be this member if it meets the diameter and wall thickness requirements.
- The diagonal Side Impact Structural member must connect the upper and lower Side Impact Structural members forward of the Main Hoop and rearward of the Front Hoop.

B3.24.4 With proper gusseting and/or triangulation, it is permissible to fabricate the Side Impact Structural members from more than one piece of tubing.

B3.24.5 Alternative geometry that does not comply with the minimum requirements given above requires an approved “Structural Equivalency Form” per Rule B.3.8.

B3.25 Inspection Holes
B3.25.1 To allow the verification of tubing wall thicknesses, 4.5 mm (0.18 inch) inspection holes must be drilled in a non-critical location of both the Main Hoop and the Front Hoop.

B3.25.2 In addition, the Technical Inspectors may check the compliance of other tubes that have minimum dimensions specified. This may be done by the use of ultra sonic testing or by the drilling of additional inspection holes at the inspector’s request.

B3.25.3 Inspection holes must be located so that the outside diameter can be measured ACROSS the inspection hole with a vernier caliper, i.e. there must be access for the vernier caliper to the inspection hole and to the outside of the tube one hundred eighty degrees (180°) from the inspection hole.
B3.26  **Monocoque General Requirements**

B3.26.1  All sections of the rules apply to monocoque structures except for the following sections which supplement or supersede other rule sections.

B3.26.2  Monocoque construction requires an approved Structural Equivalency Form, per Section B.3.8. The form must demonstrate that the design is equivalent to a welded frame in terms of energy dissipation, yield and ultimate strengths in bending, buckling and tension. Information must include: material type(s), cloth weights, resin type, fiber orientation, number of layers, core material, and lay-up technique. The 3 point bend test and shear test data and pictures must also be included as per B.3.28 Monocoque Laminate Testing. The Structural Equivalency must address each of the items below.

B3.26.3  Composite and metallic monocoques have the same requirements.

B3.26.4  Composite monocoques must meet the materials requirements in Rule B.3.7 Composite Materials.

B3.27  **Monocoque Buckling Modulus – Equivalent Flat Panel Calculation**

When specified in the rules, the E\(_I\) of the monocoque must be calculated as the E\(_I\) of a flat panel with the same composition as the monocoque about the neutral axis of the laminate. The curvature of the panel and geometric cross section of the monocoque must be ignored for these calculations.

Note: Calculations of E\(_I\) that do not reference B.3.27 may take into account the actual geometry of the monocoque.

B3.28  **Monocoque Laminate Testing**

Teams must build a representative section of the side of the monocoque as a flat panel and perform a 3 point bending test on this panel. They must prove by physical test that a section 200mm (7.9 inches) x 500 mm (19.7 inches) has at least the same properties as a baseline steel side impact tube (See B.3.3.1 “Baseline Steel Materials”) for bending stiffness and two side impact tubes for yield and ultimate strength. The data from these tests and pictures of the test samples must be included in the SEF. The test specimen must be presented at technical inspection.

B3.29  **Monocoque Front Bulkhead**

See Rule B.3.26 for general requirements that apply to all aspects of the monocoque.

B3.30  **Monocoque Front Bulkhead Support**

B3.30.1  In addition to proving that the strength of the monocoque is adequate, the monocoque must have equivalent E\(_I\) to the sum of the E\(_I\) of the six (6) baseline steel tubes that it replaces.

B3.30.2  The E\(_I\) of the vertical side of the front bulkhead support structure must be equivalent to at least the E\(_I\) of one baseline steel tube that it replaces when calculated as per rule B.3.27 Monocoque Buckling Modulus.

B3.31  **Monocoque Side Impact**

B3.31.1  In addition to proving that the strength of the monocoque is adequate, the side of the monocoque must have equivalent E\(_I\) to the sum of the E\(_I\) of the three (3) baseline steel tubes that it replaces.

B3.31.2  The side of the monocoque between the upper surface of the floor and 350 mm (13.8 inches) above the ground (Side Impact Zone) must have an E\(_I\) of at least 50% of the sum of the E\(_I\) of the three (3) baseline steel tubes that it replaces when calculated as per Rule B.3.27 Monocoque Buckling Modulus.
B3.31.3 The perimeter shear strength of the monocoque laminate should be at least 7.5 kN (1700 pounds) for a section with a diameter of 25 mm (1 inch). This must be proven by physical test by measuring the force required to pull or push a 25 mm (1 inch) diameter object through a sample of laminate and the results included in the SEF.

B3.32 Monocoque Main Hoop
B3.32.1 The Main Hoop must be constructed of a single piece of uncut, continuous, closed section steel tubing per B3.3.1 and extend down to the bottom of the monocoque.

B3.32.2 The Main Hoop must be attached at the top and bottom of the monocoque and at intermediate locations as needed to show equivalency.

B3.32.3 Mounting plates welded to the Roll Hoop shall be at least 2.0 mm (0.080 inch) thick steel.

B3.32.4 Attachment of the Main Hoop to the monocoque must comply with B3.36.

B3.33 Monocoque Front Hoop
B3.33.1 Composite materials are not allowed for the front hoop. See Rule B.3.26 for general requirements that apply to all aspects of the monocoque.

B3.33.2 Attachment of the Front Hoop to the monocoque must comply with Rule B3.36.

B3.34 Monocoque Front and Main Hoop Bracing
B3.34.1 See Rule B.3.26 for general requirements that apply to all aspects of the monocoque.

B3.34.2 Attachment of tubular Front or Main Hoop Bracing to the monocoque must comply with Rule B3.36.

B3.35 Monocoque Impact Attenuator Attachment
See Rule B.3.26 for general requirements that apply to all aspects of the monocoque.

B3.36 Monocoque Attachments
B3.36.1 In any direction, each attachment point between the monocoque and the other primary structure must be able to carry a load of 30kN.
B3.36.2 The laminate, mounting plates, backing plates and inserts must have sufficient shear area, weld area and strength to carry the specified 30kN load in any direction.

B3.36.3 Each attachment point requires a minimum of two (2) M8 grade 8.8 (or 5/16 inch Grade 5) bolts.

B3.36.4 The Front Hoop Bracing, Main Hoop Bracing and Main Hoop Bracing Supports only may use one (1) 10 mm Grade 8.8 (3/8 inch Grade 5) bolt as an alternative to B.3.36.3 if the bolt is on the centerline of tube similar to the figure below.

B3.36.5 No crushing of the core is permitted

B3.36.6 Main Hoop bracing attached to a monocoque (i.e. not welded to a rear space frame) is always considered “mechanically attached” and must comply with Rule B.3.16.

ARTICLE 4: COCKPIT

B4.1 Cockpit Opening
B4.1.1 In order to ensure that the opening giving access to the cockpit is of adequate size, a template shown in Figure 8 will be inserted into the cockpit opening. It will be held horizontally and inserted vertically until it has passed below the top bar of the Side Impact Structure (or until it is 350 mm (13.8 inches) above the ground for monocoque cars).

B4.1.2 During this test, the steering wheel, steering column, seat and all padding may be removed. The firewall may not be moved or removed.

B4.2 Cockpit Internal Cross Section:
B4.2.1 A free vertical cross section, which allows the template shown in Figure 9 to be passed horizontally through the cockpit to a point 100 mm (4 inches) rearwards of the face of the rearmost pedal when in the inoperative position, must be maintained over its entire length. If the pedals are adjustable, they will be put in their most forward position.

B4.2.2 The template, with maximum thickness of 7mm (0.275 inch), will be held vertically and inserted into the cockpit opening rearward of the Front Roll Hoop, as close to the Front Roll Hoop as the car’s design will allow.

B4.2.3 The only items that may be removed for this test are the steering wheel, and any padding required by Rule B5.7 “Driver’s Leg Protection” that can be easily removed without the use of tools with the driver in the seat. The seat may NOT be removed.
B4.2.4  Teams whose cars do not comply with B4.1 or B4.2 will not be given a Technical Inspection Sticker and will NOT be allowed to compete in the dynamic events.

Note: Cables, wires, hoses, tubes, etc. must not impede the passage of the templates required by B4.1 and B4.2.

B4.3  Driver’s Seat
B4.3.1  The lowest point of the driver’s seat must be no lower than the bottom surface of the lower frame rails or by having a longitudinal tube (or tubes) that meets the requirements for Side Impact tubing, passing underneath the lowest point of the seat.

B4.3.2  When seated in the normal driving position, adequate heat insulation must be provided to ensure that the driver will not contact any metal or other materials which may become heated to a surface temperature above sixty degrees C (60°C). The insulation may be external to the cockpit or incorporated with the driver’s seat or firewall. The design must show evidence of addressing all three (3) types of heat transfer, namely conduction, convection and radiation, with the following between the heat source, e.g. an exhaust pipe or coolant hose/tube and the panel that the driver could contact, e.g. the seat or floor:
   a.  Conduction Isolation by:
      i.  No direct contact between the heat source and the panel, or
      ii. A heat resistant, conduction isolation material with a minimum thickness of 8 mm (0.3 ins) between the heat source and the panel.
   b.  Convection Isolation by a minimum air gap of 25 mm (1 inch) between the heat source and the panel
   c.  Radiation Isolation by:
      i.  A solid metal heat shield with a minimum thickness of 0.4 mm (0.015 ins) or
      ii. Reflective foil or tape when combined with a.ii above.

B4.4  Floor Close-out
All vehicles must have a floor closeout made of one or more panels, which separate the driver from the pavement. If multiple panels are used, gaps between panels are not to exceed 3 mm (1/8 inch). The closeout must extend from the foot area to the firewall and prevent track debris from entering the car. The panels must be made of a solid, non-brittle material.

B4.5  Firewall
B4.5.1  A firewall must separate the driver compartment from all components of the fuel supply, the engine oil and the liquid cooling systems. It must protect the neck of the tallest driver. It must extend sufficiently far upwards and/or rearwards such that any point less than 100 mm (4 ins.) above the bottom of the helmet of the tallest driver shall not be in direct line of sight with any part of the fuel system, the cooling system or the engine oil system.

B4.5.2  The firewall must be a non-permeable surface made from a rigid, fire resistant material.

B4.5.3  Any firewall must seal completely against the passage of fluids, especially at the sides and the floor of the cockpit, i.e. there can be no holes in a firewall through which seat belts pass.

B4.5.4  Pass-throughs for wiring, cables, etc. are allowable if grommets are used to seal the pass-throughs. Also, multiple panels may be used to form the firewall but must be sealed at the joints.
B4.6  Accessibility of Controls
All vehicle controls, including the shifter, must be operated from inside the cockpit without any part of the driver, e.g. hands, arms or elbows, being outside the planes of the Side Impact Structure defined in Rule B3.24 and B3.31.

B4.7  Driver Visibility
B4.7.1  General Requirement
The driver must have adequate visibility to the front and sides of the car. With the driver seated in a normal driving position he/she must have a minimum field of vision of two hundred degrees (200°) (a minimum one hundred degrees (100°) to either side of the driver). The required visibility may be obtained by the driver turning his/her head and/or the use of mirrors.

B4.7.2  Mirrors
If mirrors are required to meet Rule B4.7.1, they must remain in place and adjusted to enable the required visibility throughout all dynamic events.

B4.8  Driver Egress
All drivers must be able to exit to the side of the vehicle in no more than 5 seconds. Egress time begins with the driver in the fully seated position, hands in driving position on the connected steering wheel and wearing the required driver equipment. Egress time will stop when the driver has both feet on the pavement.

ARTICLE 5:  DRIVERS EQUIPMENT (BELTS AND COCKPIT PADDING)

B5.1  Belts - General
B5.1.1  Definitions

a. A 5-point system – consists of a 76 mm (3 inch) wide lap belt, approximately 76 mm (3 inch) wide shoulder straps and a single approximately 51 mm (2 inch) wide anti-submarine strap. The single anti-submarine strap must have a metal-to-metal connection with the single release common to the lap belt and shoulder harness.

b. A 6-point system – consists of a 76 mm (3 inch) wide lap belt, approximately 76 mm (3 inch) wide shoulder straps and two (2) approximately 51 mm (2 inch) wide leg or anti-submarine straps.

c. A 7-point system – system is the same as the 6-point except it has three (3) anti-submarine straps, two (2) from the 6-point system and one (1) from the 5-point system.

Note: 6 and 7-point harnesses to FIA specification 8853/98 and SFI Specification 16.5 with approximately 51 mm (2 inch) lap belts are acceptable.

d. An "upright driving position" is defined as one with a seat back angled at thirty degrees (30°) or less from the vertical as measured along the line joining the two 200 mm circles of the template of the 95th percentile male as defined in Rule B.3.9.3 and positioned per B.3.9.4.

e. A "reclined driving position" is defined as one with a seat back angled at more than thirty degrees (30°) from the vertical as measured along the line joining the two 200 mm circles of the template of the 95th percentile male as defined in Rule B.3.9.3 and positioned per B.3.9.4.

f. The "chest-groin line" is the straight line that in side view follows the line of the shoulder belts from the chest to the release buckle.
B5.1.2 Harness Requirements

All drivers must use a 5, 6 or 7 point restraint harness meeting the following specifications:

a. All driver restraint systems must meet either SFI Specification 16.1, SFI Specification 16.5, or FIA specification 8853/98.
b. The belts must bear the appropriate dated labels.
c. The material of all straps must be in perfect condition.
d. There must be a single release common to the lap belt and shoulder harness using a metal-to-metal quick release type latch.
e. To accommodate drivers of differing builds, all lap belts must have a “quick adjuster” feature. Lap belts with “pull-up” adjusters are recommended over “pull-down” adjusters.
f. Cars with a “reclined driving position” (see B.5.1.1.e above) must have either a 6 point or 7-point harness, AND have either anti-submarine belts with “quick adjusters” or have two (2) sets of anti-submarine belts installed.
g. The shoulder harness must be the over-the-shoulder type. Only separate shoulder straps are permitted (i.e. “y”-type shoulder straps are not allowed). The “H”-type configuration is allowed.
h. It is mandatory that the shoulder harness, where it passes over the shoulders, be 76 mm (3 inch) wide, except as noted below. The shoulder harness straps must be threaded through the three bar adjusters in accordance with manufacturer’s instructions.
i. When the HANS device is used by the driver, FIA certified 51 mm (2 inch) wide shoulder harnesses are allowed. Should a driver, at anytime not utilize the HANS device, then 76 mm (3 inch) wide shoulder harnesses are required.

B5.1.3 Harness Replacement

SFI spec harnesses must be replaced following December 31st of the 2nd year after the date of manufacture as indicated by the label. FIA spec harnesses must be replaced following December 31st of the year marked on the label. (Note: FIA belts are normally certified for five (5) years from the date of manufacture.)

B5.1.4 The restraint system must be worn tightly at all times.

5.2 Belt, Strap and Harness Installation - General

B5.2.1 The lap belt, shoulder harness and anti-submarine strap(s) must be securely mounted to the Primary Structure. Such structure and any guide or support for the belts must meet the minimum requirements of B.3.3.1.

B5.2.2 The tab to which any harness is attached must have:

a. A minimum cross sectional area of 40 sq. mms (0.062 sq. ins) of steel to be sheared or failed in tension at any point of the tab, and
b. A minimum thickness of 1.6 mm (0.063 inches).

Note: Double shear mounting is preferred.

B.5.2.3 Harnesses, belts and straps must not pass through a firewall, i.e. all harness attachment points must be on the driver’s side of any firewall.

B.5.2.4 The attachment of the Driver’s Restraint System to a monocoque structure requires an approved Structural Equivalency Form per Rule B.3.8.

B.5.2.5 The restraint system installation is subject to approval of the Chief Technical Inspector.
B5.3 Lap Belt Mounting

B5.3.1 The lap belt must pass around the pelvic area below the Anterior Superior Iliac Spines (the hip bones).

B5.3.2 The lap belts should not be routed over the sides of the seat. The lap belts should come through the seat at the bottom of the sides of the seat to maximize the wrap of the pelvic surface and continue in a straight line to the anchorage point.

B5.3.3 Where the belts or harness pass through a hole in the seat, the seat must be rolled or grommeted to prevent chafing of the belts.

B5.3.4 To fit drivers of differing statures correctly, in side view, the lap belt must be capable of pivoting freely by using either a shouldered bolt or an eye bolt attachment, i.e. mounting lap belts by wrapping them around frame tubes is no longer acceptable.

B5.3.5 With an “upright driving position”, in side view the lap belt must be at an angle of between forty-five degrees (45°) and sixty-five degrees (65°) to the horizontal. This means that the centerline of the lap belt at the seat bottom should be between 0 – 76 mm (0 – 3 inches) forward of the seat back to seat bottom junction. (See Figure 10).

B5.3.6 With a “reclined driving position”, in side view the lap belt must be between an angle of sixty degrees (60°) and eighty degrees (80°) to the horizontal.

B5.4 Shoulder Harness

B5.4.1 The shoulder harness must be mounted behind the driver to structure that meets the requirements of 3.3.1. However, it cannot be mounted to the Main Roll Hoop Bracing or attendant structure without additional bracing to prevent loads being transferred into the Main Hoop Bracing.

B5.4.2 If the harness is mounted to a tube that is not straight, the joints between this tube and the structure to which it is mounted must be reinforced in side view by gussets or triangulation tubes to prevent torsional rotation of the harness mounting tube.

B5.4.3 The shoulder harness mounting points must be between 178 mm (7 inches) and 229 mm (9 inches) apart. (See Figure 11).

B5.4.4 From the driver’s shoulders rearwards to the mounting point or structural guide, the shoulder harness must be between ten degrees (10°) above the horizontal and twenty degrees (20°) below the horizontal. (See Figure 12).

B5.5 Anti-Submarine Belt Mounting

B5.5.1 The anti-submarine belt of a 5 point harness should be mounted in line with, or angled slightly forward (up to twenty degrees (20°)) of, the driver’s chest-groin line.

B5.5.2 The anti-submarine belts of a 6 point harness should be mounted either:

a. With the belts going vertically down from the groin, or angled up to twenty degrees (20°) rearwards. The anchorage points should be approximately 100 mm (4 inches) apart. Or

b. With the anchorage points on the Primary Structure at or near the lap belt anchorages, the driver sitting on the anti-submarine belts, and the belts coming up around the groin to the release buckle.
B5.6 Head Restraint
B5.6.1 A head restraint must be provided on the car to limit the rearward motion of the driver’s head.

B5.6.2 The restraint must:
• Be vertical or near vertical in side view.
• Be padded with an energy absorbing material such as Ethafoam® or Ensolite® with a minimum thickness of 38 mm (1.5 inches).
• Be located so that:
  - It is no more than 25 mm (1 inch) away from the back of the driver’s helmet in the uncompressed state, with the driver in his/her normal driving position.
  - The contact point of the back of the driver’s helmet on the head restraint is no less than 50 mm (2 inch) from any edge of the head restraint.

B5.6.3 The restraint, its attachment and mounting must be strong enough to withstand a force of 890 Newtons (200 lbs. force) applied in a rearward direction.

Notes: (1) The head restraint must meet the above requirements for all drivers.
(2) Head restraints may be changed to accommodate different drivers (See B.1.2.2.d)

B5.7 Roll Bar Padding
Any portion of the roll bar, roll bar bracing or frame which might be contacted by the driver’s helmet must be covered with a minimum thickness of 12 mm (0.5 inch) of padding which meets SFI spec 45.1 or FIA 8857-2001.

B5.8 Driver’s Leg Protection
B5.8.1 To keep the driver’s legs away from moving or sharp components, all moving suspension and steering components, and other sharp edges inside the cockpit between the front roll hoop and a vertical plane 100 mm (4 inches) rearward of the pedals, must be shielded with a shield made of a solid material. Moving components include, but are not limited to springs, shock absorbers, rocker arms, anti-roll/sway bars, steering racks and steering column CV joints.

B5.8.2 Covers over suspension and steering components must be removable to allow inspection of the mounting points.

ARTICLE 6: GENERAL CHASSIS RULES

B6.1 Suspension
B6.1.1 The car must be equipped with a fully operational suspension system with shock absorbers, front and rear, with usable wheel travel of at least 50.8 mm (2 inches), 25.4 mm (1 inch) jounce and 25.4 mm (1 inch) rebound, with driver seated. The judges reserve the right to disqualify cars which do not represent a serious attempt at an operational suspension system or which demonstrate handling inappropriate for an autocross circuit.

B6.1.2 All suspension mounting points must be visible at Technical Inspection, either by direct view or by removing any covers.
B6.2 Ground Clearance
The ground clearance must be sufficient to prevent any portion of the car (other than tires) from touching the ground during track events, and with the driver aboard there must be a minimum of 25.4 mm (1 inch) of static ground clearance under the complete car at all times.

B6.3 Wheels
B6.3.1 The wheels of the car must be 203.2 mm (8.0 inches) or more in diameter.
B6.3.2 Any wheel mounting system that uses a single retaining nut must incorporate a device to retain the nut and the wheel in the event that the nut loosens.

B6.4 Tires
B6.4.1 Vehicles may have two types of tires as follows:
- Dry Tires – The tires on the vehicle when it is presented for technical inspection are defined as its “Dry Tires”. The dry tires may be any size or type. They may be slicks or treaded.
- Rain Tires – Rain tires may be any size or type of treaded or grooved tire provided:
  1. The tread pattern or grooves were molded in by the tire manufacturer, or were cut by the tire manufacturer or his appointed agent. Any grooves that have been cut must have documentary proof that it was done in accordance with these rules.
  2. There is a minimum tread depth of 2.4 mms (3/32 inch).

Note: Hand cutting, grooving or modification of the tires by the teams is specifically prohibited.

B6.4.2 Within each tire set, the tire compound or size, or wheel type or size may not be changed after static judging has begun. Tire warmers are not allowed. No traction enhancers may be applied to the tires after the static judging has begun.

B6.5 Steering
B6.5.1 The steering system must affect at least two (2) wheels.
B6.5.2 The steering system must have positive steering stops that prevent the steering linkages from locking up (the inversion of a four-bar linkage at one of the pivots). The stops may be placed on the uprights or on the rack and must prevent the tires from contacting suspension, body, or frame members during the track events.
B6.5.3 Allowable steering system free play is limited to seven degrees (7°) total measured at the steering wheel.
B6.5.4 Rear wheel steering is permitted only if mechanical stops limit the turn angle of the rear wheels to ± three degrees (± 3°) from the straight ahead position.
B6.5.5 The steering wheel must be mechanically connected to the front wheels, i.e. “steer-by-wire” of the front wheels is prohibited.
B6.5.6 The steering wheel must be attached to the column with a quick disconnect. The driver must be able to operate the quick disconnect while in the normal driving position with gloves on.
B6.5.7 The steering wheel must have a continuous perimeter that is near circular or near oval, i.e. the outer perimeter profile can have some straight sections, but no concave sections. “H”, “Figure 8”, or cutout wheels are not allowed.
B6.5.8 In any angular position, the top of the steering wheel must be no higher than the top-most surface of the Front Hoop. See Figure 3.

B6.6 Jacking Point
B6.6.1 A jacking point, which is capable of supporting the car’s weight and of engaging the organizers’ “quick jacks”, must be provided at the very rear of the car.

B6.6.2 The jacking point is required to be:
- Visible to a person standing 1 metre (3 feet) behind the car.
- Painted orange.
- Oriented horizontally and perpendicular to the centerline of the car
- Made from round, 25 – 29 mm (1 – 1 1/8 inch) O.D. aluminum or steel tube
- A minimum of 300 mm (12 inches) long
- Exposed around the lower 180 degrees (180°) of its circumference over a minimum length of 280 mm (11 in)
- The height of the tube is required to be such that:
  - There is a minimum of 75 mm (3 in) clearance from the bottom of the tube to the ground measured at tech inspection.
  - With the bottom of the tube 200 mm (7.9 in) above ground, the wheels do not touch the ground when they are in full rebound.

B6.7 Rollover Stability
B6.7.1 The track and center of gravity of the car must combine to provide adequate rollover stability.

B6.7.2 Rollover stability will be evaluated on a tilt table using a pass/fail test. The vehicle must not roll when tilted at an angle of sixty degrees (60°) to the horizontal in either direction, corresponding to 1.7 G’s. The tilt test will be conducted with the tallest driver in the normal driving position.

ARTICLE 7: BRAKE SYSTEM

B7.1 Brake System - General
The car must be equipped with a braking system that acts on all four wheels and is operated by a single control.

B7.1.1 It must have two independent hydraulic circuits such that in the case of a leak or failure at any point in the system, effective braking power is maintained on at least two wheels. Each hydraulic circuit must have its own fluid reserve, either by the use of separate reservoirs or by the use of a dammed, OEM-style reservoir.

B7.1.2 A single brake acting on a limited-slip differential is acceptable.

B7.1.3 The brake system must be capable of locking all four (4) wheels during the test specified below.

B7.1.4 “Brake-by-wire” systems are prohibited.

B7.1.5 Unarmored plastic brake lines are prohibited.

B7.1.6 The braking systems must be protected with scatter shields from failure of the drive train (see B.8.13) or from minor collisions.
B7.1.7 In side view no portion of the brake system that is mounted on the sprung part of the car can project below the lower surface of the frame or the monocoque, whichever is applicable.

B7.2 Brake Test
The brake system will be dynamically tested and must demonstrate the capability of locking all four (4) wheels and stopping the vehicle in a straight line at the end of an acceleration run specified by the brake inspectors.

B7.3 Brake Over-Travel Switch
B7.3.1 A brake pedal over-travel switch must be installed on the car. This switch must be installed so that in the event of brake system failure such that the brake pedal over travels, the switch will be activated and will stop the engine from running. This switch must kill the ignition and cut the power to any electrical fuel pumps.

B7.3.2 Repeated actuation of the switch must not restore power to these components, and it must be designed so that the driver cannot reset it.

B7.3.3 The switch must be implemented with analog components, and not through recourse to programmable logic controllers, engine control units, or similar functioning digital controllers.

B7.4 Brake Light
B7.4.1 The car must be equipped with a red brake light of at least 15 watts, or equivalent, clearly visible from the rear. If an LED brake light is used, it must be clearly visible in very bright sunlight.

B7.4.2 This light must be mounted between the wheel centerline and driver’s shoulder level vertically and approximately on vehicle centerline laterally.

ARTICLE 8: POWERTRAIN

B8.1 Engine Limitation
B8.1.1 The engine(s) used to power the car must be four-stroke piston engine(s) with a displacement not exceeding 610 cc per cycle.

B8.1.2 The engine can be modified within the restrictions of the rules.

B8.1.3 If more than one engine is used, the total displacement cannot exceed 610 cc and the air for all engines must pass through a single air intake restrictor (see B.8.6, “Intake System Restrictor.”)

B8.1.4 Hybrid powertrains utilizing on-board energy storage are not allowed.

B8.2 Engine Inspection
The organizer will measure or tear down a substantial number of engines to confirm conformance to the rules. The initial measurement will be made externally with a measurement accuracy of one (1) percent. When installed to and coaxially with spark plug hole, the measurement tool has dimensions of 381 mm (15 inches) long and 30 mm (1.2 inches) diameter. Teams may choose to design in access space for this tool above each spark plug hole to reduce time should their vehicle be inspected.
B8.3 **Starter**
Each car must be equipped with an on-board starter which, during the competition, must be used to start the car at all times. Push starts, or the use of a remote starter, are prohibited.

B8.4 **Air Intake System**
B8.4.1 **Air Intake System Location**
All parts of the engine air and fuel control systems (including the throttle or carburetor, and the complete air intake system, including the air cleaner and any air boxes) must lie within the surface defined by the top of the roll bar and the outside edge of the four tires. (See Figure 13).

B8.4.2 Any portion of the air intake system that is less than 350 mm (13.8 inches) above the ground must be shielded from side or rear impact collisions by structure built to Rule B.3.24 or B.3.31 as applicable.

B8.5 **Throttle and Throttle Actuation**
B8.5.1 **Carburetor/Throttle Body**
The car must be equipped with a carburetor or throttle body. The carburetor or throttle body may be of any size or design.

B8.5.2 **Throttle Actuation**
The throttle must be actuated mechanically, i.e. via a cable or a rod system. The use of electronic throttle control (ETC) or “drive-by-wire” is prohibited.

B8.5.3 The throttle cable or rod must have smooth operation, and must not have the possibility of binding or sticking.

B8.5.4 The throttle actuation system must use at least two (2) return springs located at the throttle body, so that the failure of any component of the throttle system will not prevent the throttle returning to the closed position.

*Note:* Throttle Position Sensors (TPS) are NOT acceptable as return springs.

B8.5.5 Throttle cables must be at least 50.8 mm (2 inches) from any exhaust system component and out of the exhaust stream.

B8.5.6 A positive pedal stop must be incorporated on the throttle pedal to prevent over stressing the throttle cable or actuation system.

B8.6 **Intake System Restrictor**
B8.6.1 In order to limit the power capability from the engine, a single circular restrictor must be placed in the intake system between the throttle and the engine and all engine airflow must pass through the restrictor.

B8.6.2 Any device that has the ability to throttle the engine downstream of the restrictor is prohibited.

B8.6.3 The maximum restrictor diameters are:
- Gasoline fueled cars - 20.0 mm (0.7874 inch)
- E-85 fueled cars – 19.0 mm (0.7480 inch)

B8.6.4 The restrictor must be located to facilitate measurement during the inspection process.
B8.6.5 The circular restricting cross section may NOT be movable or flexible in any way, e.g. the restrictor may not be part of the movable portion of a barrel throttle body.

B8.6.6 If more than one engine is used, the intake air for all engines must pass through the one restrictor.

B8.7 Turbochargers & Superchargers
B8.7.1 Turbochargers or superchargers are allowed if the competition team designs the application. Engines that have been designed for and originally come equipped with a turbocharger are not allowed to compete with the turbo installed.

B8.7.2 The restrictor must be placed upstream of the compressor but after the carburetor or throttle valve. Thus, the only sequence allowed is throttle, restrictor, compressor, engine.

B8.7.3 The intake air may be cooled with an intercooler (a charge air cooler). Only ambient air may be used to remove heat from the intercooler system. Air-to-air and water-to air intercoolers are permitted. The coolant of a water-to-air intercooler system must comply with Rule B.8.10.

B8.8 Fuel Lines
B8.8.1 Plastic fuel lines between the fuel tank and the engine (supply and return) are prohibited.

B8.8.2 If rubber fuel line or hose is used, the components over which the hose is clamped must have annular bulb or barbed fittings to retain the hose. Also, clamps specifically designed for fuel lines must be used. These clamps have three (3) important features, (i) a full 360 degree (360°) wrap, (ii) a nut and bolt system for tightening, and (iii) rolled edges to prevent the clamp cutting into the hose. Worm-gear type hose clamps are not approved for use on any fuel line.

B8.8.3 Fuel lines must be securely attached to the vehicle and/or engine.

B8.8.4 All fuel lines must be shielded from possible rotating equipment failure or collision damage.

B8.9 Fuel Injection System Requirements
The following requirements apply to fuel injection systems.

B8.9.1 Fuel Lines – Flexible fuel lines must be either (i) metal braided hose with either crimped-on or reusable, threaded fittings, or (ii) reinforced rubber hose with some form of abrasion resistant protection with fuel line clamps per B.8.8.2. Note: Hose clamps over metal braided hose will not be accepted.

B8.9.2 Fuel Rail – The fuel rail must be securely attached to the engine cylinder block, cylinder head, or intake manifold with brackets and mechanical fasteners. This precludes the use of hose clamps, plastic ties, or safety wire.

B8.9.3 Intake Manifold – The intake manifold must be securely attached to the engine block or cylinder head with brackets and mechanical fasteners. This precludes the use of hose clamps, plastic ties, or safety wires. The use of rubber bushings or hose is acceptable for creating and sealing air passages, but is not considered a structural attachment.

B8.10 Coolant Fluid Limitations
Water-cooled engines must only use plain water. Glycol-based antifreeze, “water wetter”, water pump lubricants of any kind, or any other additives are strictly prohibited.
**B8.11 System Sealing**

B8.11.1 The engine and transmission must be sealed to prevent leakage.

B8.11.2 Separate catch cans must be employed to retain fluids from any vents for the coolant system or the crankcase or engine lubrication system. Each catch-can must have a minimum volume of ten (10) percent of the fluid being contained or 0.9 liter (one U.S. quart) whichever is greater.

B8.11.3 Catch cans must be capable of containing boiling water without deformation, and be located rearwards of the firewall below driver’s shoulder level, and be positively retained, i.e. no tie-wraps or tape.

B8.11.4 *Any catch can on the cooling system must vent through a hose with a minimum internal diameter of 3 mm (1/8 inch) down to the bottom levels of the Frame.*

B8.11.5 Any crankcase or engine lubrication vent lines routed to the intake system must be connected upstream of the intake system restrictor.

**B8.12 Transmission and Drive**

Any transmission and drivetrain may be used.

**B8.13 Drive Train Shields and Guards**

B8.13.1 Exposed high-speed equipment, such as pulleys, torque converters, clutches, belt drives and clutch drives, must be fitted with scatter shields in case of failure.

B8.13.2 Scatter shields for chains or belts must not be made of perforated material.

B8.13.3 Chain drive - Scatter shields for chains must be made of at least 2.66 mm (0.105 inch) steel (no alternatives are allowed), and have a minimum width equal to three (3) times the width of the chain.

B8.13.4 Belt drive - Scatter shields for belts must be made from at least 3.0 mm (0.120 inch) Aluminum Alloy 6061-T6, and have a minimum width that is equal to the belt width plus 35% on each side of the belt (1.7 times the width of the belt).

B8.13.5 Attachment Fasteners - All fasteners attaching scatter shields and guards must be a minimum 6mm grade M8.8 (1/4 inch SAE grade 5).

B8.13.6 Attached shields and guards must be mounted so that they remain laterally aligned with the chain or belt under all conditions.

B8.13.7 Finger Guards – Finger guards may be made of lighter material.

B8.13.8 *Rotating Drive Components – Continuously Variable Transmissions (CVT)s and drive gears must be encased or properly shielded.*

**ARTICLE 9: FUEL AND FUEL SYSTEM**

**B9.1 Fuel**

The basic fuel available at competitions in the Formula SAE Series is unleaded gasoline with an octane rating of 93 (R+M)/2 (approximately 98 RON). *However, the basic fuel may be changed at the discretion of the organizing body.* Other fuels may be available at the discretion of the organizing body.
B9.1.1 Unless otherwise announced by the individual organizing body, the fuel at competitions in the Formula SAE Series will be provided by the organizer.

B9.1.2 During all performance events the cars must be operated with the fuels provided by the organizer at the competition.

B9.1.3 Nothing may be added to the provided fuels. This prohibition includes nitrous oxide or any other oxidizing agent.

**Note 1:** Teams are advised that the fuel supplied in the United States is subject to various federal and state regulations and may contain up to ten percent (10%) ethanol. The exact chemical composition and physical characteristics of the available fuel may not be known prior to the competition.

**Note 2:** The fuels provided at Formula SAE Michigan are expected to be 93 and 100 octane \([(R+M)/2]\) gasoline and E-85. The fuels provided at Formula SAE California are expected to be 91 and 97 octane \([(R+M)/2]\) gasoline and E-85. This is subject to change.

Consult the individual competition websites for fuel types and other information.

**B9.2 Fuel Additives - Prohibited**

B9.2.1 No agents other than fuel (gasoline or E85), and air may be induced into the combustion chamber. Non-adherence to this rule will be reason for disqualification.

B9.2.2 Officials have the right to inspect the oil.

**B9.3 Fuel Temperature Changes - Prohibited**

The temperature of fuel introduced into the fuel system may not be changed with the intent to improve calculated fuel economy.

**B9.4 Fuel Tanks**

B9.4.1 The fuel tank is defined as that part of the fuel containment device that is in contact with the fuel. It may be made of a rigid material or a flexible material.

B9.4.2 Fuel tanks made of a rigid material cannot be used to carry structural loads, e.g. from roll hoops, suspension, engine or gearbox mounts, and must be securely attached to the vehicle structure with mountings that allow some flexibility such that chassis flex cannot unintentionally load the fuel tank.

B9.4.3 Any fuel tank that is made from a flexible material, for example a bladder fuel cell or a bag tank, must be enclosed within a rigid fuel tank container which is securely attached to the vehicle structure. Fuel tank containers (containing a bladder fuel cell or bag tank) may be load carrying.

B9.4.4 Any size fuel tank may be used.

B9.4.5 The fuel system must have a provision for emptying the fuel tank if required.

**B9.5 Fuel System Location Requirements**

B9.5.1 All parts of the fuel storage and supply system must lie within the surface defined by the top of the roll bar and the outside edge of the four tires. (See Figure 13).
B9.5.2 All fuel tanks must be shielded from side or rear impact collisions. Any fuel tank which is located outside the Side Impact Structure required by B.3.24 or B.3.31 must be shielded by structure built to B.3.2, or B.3.31.

B9.5.3 A firewall must be incorporated to separate the fuel tank from the driver, per Rule B.4.5.

B9.6 Fuel Tank Filler Neck & Sight Tube
B9.6.1 All fuel tanks must have a filler neck:
(a) at least 38 mm (1.5 inches) diameter,
(b) at least 125 mm (4.9 inches) vertical height and
(c) angled at no more than forty-five degrees (45°) from the vertical.

B9.6.2 The 125 mm of vertical height must be above the top level of the tank, and must be accompanied by a clear fuel resistant sight tube for reading the fuel level. (Figure 14).

B9.6.3 The sight tube must have at least 75 mm (3 inches) of vertical height and a minimum inside diameter of 6 mm (0.25 inches).

B9.6.4 The sight tube must not run below the top surface of the fuel tank.

B9.6.5 A clear filler tube may be used as a sight tube, subject to approval by the Rules Committee or technical inspectors at the event.

B9.6.6 A permanent, non-moveable fuel level line must be located between 12.7 mm and 25.4 mm (0.5 inch and 1 inch) below the top of the sight tube. This line will be used as the fill line for the Tilt Test (Rule B.9.9), and before and after the Endurance Test to measure the amount of fuel used during the Endurance Event.

B9.6.7 The sight tube and fuel level line must be clearly visible to an individual filling the tank.

B9.7 Tank Filling Requirement
B9.7.1 The tank must be capable of being filled to capacity without manipulating the tank or vehicle in any way (shaking vehicle, etc.).

B9.7.2 The fuel system must be designed such that the spillage during refueling cannot contact the driver position, exhaust system, hot engine parts, or the ignition system.

B9.7.3 Belly pans must be vented to prevent accumulation of fuel.

B9.8 Venting Systems
B9.8.1 The fuel tank and carburetor venting systems must be designed such that fuel cannot spill during hard cornering or acceleration. This is a concern since motorcycle carburetors normally are not designed for lateral accelerations.

B9.8.2 All fuel vent lines must be equipped with a check valve to prevent fuel leakage when the tank is inverted. All fuel vent lines must exit outside the bodywork.

B9.9 Fuel System Integrity – Tilt Test
B9.9.1 Tilt Test - Fuel and Fluids
During technical inspection, the car must be capable of being tilted to a forty-five degree (45°) angle without leaking fuel or fluid of any type.
B9.9.2 The tilt test will be conducted with the vehicle containing the maximum amount of fluids it will carry during any test or event.

ARTICLE 10: EXHAUST SYSTEM AND NOISE CONTROL

B10.1 Exhaust System General
The car must be equipped with a muffler in the exhaust system to reduce the noise to an acceptable level.

B10.1.1 Exhaust Outlet
The exhaust must be routed so that the driver is not subjected to fumes at any speed considering the draft of the car.

B10.1.2 The exhaust outlet(s) must not extend more than 45 cm (17.7 inches) behind the centerline of the rear axle, and shall be no more than 60 cm (23.6 inches) above the ground.

B10.1.3 Any exhaust components (headers, mufflers, etc.) that protrude from the side of the body in front of the main roll hoop must be shielded to prevent contact by persons approaching the car or a driver exiting the car.

B10.2 Noise Measuring Procedure
B10.2.1 The sound level will be measured during a static test. Measurements will be made with a free-field microphone placed free from obstructions at the exhaust outlet level, 0.5 m (19.68 inches) from the end of the exhaust outlet, at an angle of forty-five degrees (45°) with the outlet in the horizontal plane. The test will be run with the gearbox in neutral at the engine speed defined below. Where more than one exhaust outlet is present, the test will be repeated for each exhaust and the highest reading will be used.

B10.2.2 The car must be compliant at all engine speeds up to the test speed defined below.

B10.2.3 If the exhaust has any form of movable tuning or throttling device or system, it must be compliant with the device or system in all positions. The position of the device must be visible to the officials for the noise test and must be manually operable by the officials during the noise test.

B10.2.4 Test Speeds
The test speed for a given engine will be the engine speed that corresponds to an average piston speed of 914.4 m/min (3,000 ft/min) for automotive or motorcycle engines, and 731.5 m/min (2,400 ft/min) for “industrial engines”. The calculated speed will be rounded to the nearest 500 rpm. The test speeds for typical engines will be published by the organizers.

An “industrial engine” is defined as an engine which, according to the manufacturers’ specifications and without the required restrictor, is not capable of producing more than 5 hp per 100cc. To have an engine classified as “an industrial engine”, approval must be obtained from organizers prior to the Competition.

B10.3 Maximum Sound Level
The maximum permitted sound level is 110 dBA, fast weighting.
B10.4 Noise Level Re-testing
At the option of the officials, noise can be measured at any time during the competition. If a car fails
the noise test, it will be withheld from the competition until it has been modified and re-passes the
noise test.

ARTICLE 11: ELECTRICAL SYSTEM

B11.1 Master Switches
B11.1.1 The vehicle must be equipped with two (2) master switches. Actuating either switch must stop the
engine.

B11.1.2 The international electrical symbol consisting of a red spark on a white-edged blue triangle must be
affixed in close proximity to each switch.

Note: Teams are reminded that any alternator field wire must also be disabled by each master switch
to prevent any possible feedback through the field coil circuit.

B11.2 Primary Master Switch
B11.2.1 The primary master switch must:
   a. Be located on the (driver’s) right side of the vehicle, in proximity to the Main Hoop, at
      shoulder height and be easily actuated from outside the car.
   b. Disable power to ALL electrical circuits, including the battery, alternator, lights, fuel
      pump(s), ignition and electrical controls.
   c. All battery current must flow through this switch.
   d. Be of a rotary type and must be direct acting, i.e. it cannot act through a relay.

An example of a typical switch that meets these requirements is shown below.

B11.2.2 The “OFF” position of the primary master switch must be clearly marked.

B11.3 Cockpit-mounted Master Switch
B11.3.1 The cockpit-mounted master switch:
   a. Must be located to provide easy actuation by the driver in an emergency or panic situation.
   b. Must be located within easy reach of the belted-in driver, alongside the steering wheel, and
      unobstructed by the steering wheel or any other part of the car. It is suggested that it be placed
      on the same side of the steering wheel as the shifter mechanism.
   c. Must be a push/pull Emergency switch. The switch must be installed such that:
      i. From the ON position, pushing on the switch will disable power to the ignition and all
         fuel pumps, and
ii. From the OFF position, pulling on the switch will enable power to the ignition and fuel pump(s). Switches that require a twist or twist and pull to enable power are acceptable.

d. May act through a relay.

Examples of typical switches that meet these requirements are shown below.

B11.4 Batteries
B11.4.1 All batteries, i.e. on-board power supplies, must be attached securely to the frame.

B11.4.2 Any wet-cell battery located in the driver compartment must be enclosed in a nonconductive marine-type container or equivalent.

B11.4.3 The hot terminal must be insulated on all cars.

ARTICLE 12: AERODYNAMIC DEVICES

B12.1 Aero Dynamics and Ground Effects - General
All aerodynamic devices must satisfy the following requirements:

B12.2 Location
B12.2.1 In plan view, no part of any aerodynamic device, wing, under tray or splitter can be:
   a. Further forward than 460 mm (18 inches) forward of the fronts of the front tires
   b. No further rearward than the rear of the rear tires.
   c. No wider than the outside of the front tires measured at the height of the front hubs.

B12.3 Minimum Radii of Edges of Aerodynamic Devices
B12.3.1 All wing leading edges must have a minimum radius 12.7 mm (0.5 inch). Wing leading edges must be as blunt or blunter than the required radii for an arc of plus or minus forty-five degrees (± 45°) centered on a plane parallel to the ground or similar reference plane for all incidence angles which lie within the range of adjustment of the wing or wing element. If leading edge slats or slots are used, both the fronts of the slats or slots and of the main body of the wings must meet the minimum radius rules.

B12.3.2 Other Edge Radii Limitations - All wing edges, end plates, Gurney flaps, wicker bills, splitters undertrays and any other wing accessories must have minimum edge radii of at least 3 mm (1/8 inch) i.e., this means at least a 6 mm (1/4 inch) thick edge.
B12.3.3 Wing Edge Restrictions - No small radius edges may be included anywhere on the wings in such a way that would violate the intent of these rules (e.g. vortex generators with thin edges, sharp square corners on end plates, etc.).

B12.4 Ground Effect Devices – No power device may be used to move or remove air from under the vehicle except fans designed exclusively for cooling. Power ground effects are prohibited.

B12.5 Driver Egress Requirements

B12.5.1 Egress from the vehicle within the time set in Rule B.4.8 “Driver Egress,” must not require any movement of the wing or wings or their mountings.

B12.5.2 The wing or wings must be mounted in such positions, and sturdily enough, that any accident is unlikely to deform the wings or their mountings in such a way to block the driver’s egress.

ARTICLE 13: COMPRESSED GAS SYSTEMS AND HIGH PRESSURE HYDRAULICS

B13.1 Compressed Gas Cylinders and Lines

Any system on the vehicle that uses a compressed gas as an actuating medium must comply with the following requirements:

a. Working Gas-The working gas must be nonflammable, e.g. air, nitrogen, carbon dioxide.

b. Cylinder Certification- The gas cylinder/tank must be of proprietary manufacture, designed and built for the pressure being used, certified by an accredited testing laboratory in the country of its origin, and labeled or stamped appropriately.

c. Pressure Regulation-The pressure regulator must be mounted directly onto the gas cylinder/tank.

d. Protection – The gas cylinder/tank and lines must be protected from rollover, collision from any direction, or damage resulting from the failure of rotating equipment.

e. Cylinder Location- The gas cylinder/tank and the pressure regulator must be located either rearward of the Main Roll Hoop and within the envelope defined by the Main Roll Hoop and the Frame (see B3.2), or in a structural side-pod that meets the requirements of B3.24 or B3.31. It must not be located in the cockpit.

f. Cylinder Mounting- The gas cylinder/tank must be securely mounted to the Frame, engine or transmission.

g. Cylinder Axis- The axis of the gas cylinder/tank must not point at the driver.

h. Insulation- The gas cylinder/tank must be insulated from any heat sources, e.g. the exhaust system.

i. Lines and Fittings- The gas lines and fittings must be appropriate for the maximum possible operating pressure of the system.

B13.2 High Pressure Hydraulic Pumps and Lines

The driver and anyone standing outside the car must be shielded from any hydraulic pumps and lines (other than brake lines) by steel or aluminum shields with a minimum thickness of 1 mm (0.039 inch).
ARTICLE 14: FASTENERS

B14.1 Fastener Grade Requirements
B14.1.1 All threaded fasteners utilized in the driver’s cell structure, and the steering, braking, driver’s harness and suspension systems must meet or exceed, SAE Grade 5, Metric Grade 8.8 and/or AN/MS specifications.

B14.1.2 The use of button head cap, pan head, flat head or round head screws or bolts in critical locations is prohibited. These locations include the driver’s cell structure, and driver’s harness attachment.

Note: Hexagonal recessed drive screws or bolts (sometimes called Socket head cap screws or Allen screws/bolts) are permitted.

B14.2 Securing Fasteners
B14.2.1 All critical bolt, nuts, and other fasteners on the steering, braking, driver’s harness, and suspension must be secured from unintentional loosening by the use of positive locking mechanisms. Positive locking mechanisms include:

- Correctly installed safety wiring
- Cotter pins
- Nylon lock nuts
- Prevailing torque lock nuts

Note: Lock washers and thread locking compounds, e.g. Loctite®, DO NOT meet the positive locking requirement.

B14.2.2 There must be a minimum of two (2) full threads projecting from any lock nut.

B14.2.3 All spherical rod ends and spherical bearings on the steering or suspension must be in double shear or captured by having a screw/bolt head or washer with an O.D. that is larger than spherical bearing housing I.D.

B14.2.4 Adjustable tie-rod ends must be constrained with a jam nut to prevent loosening.

ARTICLE 15: TRANSPONDERS

B15.1 Transponders – North American FSAE Competitions
B15.1.1 Transponders will be used as part of the timing system for the dynamic events at the North American FSAE competitions

B15.1.2 Each team is responsible for having a functional, properly mounted transponder of the specified type on their vehicle. Vehicles without a specified transponder will not be allowed to compete in any event for which a transponder is used for timing and scoring.

B15.1.3 All vehicles must be equipped with at least one AMB TranX260 Rechargeable or AMB TranX260 Direct Power transponder.
B15.2 Transponders – Events outside North America
Transponders may be used for timing and scoring at FSAE Australasia, FSAE Brazil, FSAE Italy and Formula Student and may be provided by the competition organizers. The transponders specified in 15.1 above for the North American FSAE competitions may or may not be compatible with the systems used for other events. Teams should check the individual competition websites for further details.

B15.3 Transponder Mounting – All Events
The transponder mounting requirements are:
   a. Orientation – The transponder must be mounted vertically and orientated so the number can be read “right-side up”.
   b. Location – The transponder must be mounted on the driver’s right side of the car forward of the front roll hoop. The transponder must be no more than 60 cm (24 in) above the track.
   c. Obstructions – There must be an open, unobstructed line between the antenna on the bottom of the transponder and the ground. Metal and carbon fiber may interrupt the transponder signal. The signal will normally transmit through fiberglass and plastic. If the signal will be obstructed by metal or carbon fiber, a 10.2 cm (4 in) diameter opening can be cut, the transponder mounted flush with the opening, and the opening covered with a material transparent to the signal.
   d. Protection – Mount the transponder where it will be protected from obstacles.

ARTICLE 16: VEHICLE IDENTIFICATION

B16.1 Car Number
B16.1.1 Each car will be assigned a number at the time of its entry into a competition.

B16.1.2 Car numbers must appear on the vehicle as follows:
   Locations: In three (3) locations: the front and both sides;
      a. Height: At least 15.24 cm (6 inch) high;
      b. Font: Block numbers (i.e. sans-serif characters). Italic, outline, serif, shadow, or cursive numbers are prohibited.
      c. Stroke Width and Spacing between Numbers: At least 2.0 cm (3/4 inch).
      d. Color: Either white numbers on a black background or black numbers on a white background. No other color combinations will be approved.
      e. Background shape: The number background must be one of the following: round, oval, square or rectangular. There must be at least 2.5 cm (1 inch) between the edge of the numbers and the edge of the background.
f. Clear: The numbers must not be obscured by parts of the car, e.g. wheels, side pods, exhaust system, etc.

B16.1.3 Car numbers for teams registered for North American FSAE competitions can be found on the “Registered Teams” section of the relevant Formula SAE website.

Comment: Car numbers must be quickly read by course marshals when your car is moving at speed. Make your numbers easy to see and easy to read.

Example:

83

B16.2 School Name
B16.2.1 Each car must clearly display the school name (or initials – if unique and generally recognized) in roman characters at least 5.08cm, (2 inch) high on both sides of the vehicle. The characters must be placed on a high contrast background in an easily visible location.

B16.2.2 The school name may also appear in non-roman characters, but the roman character version must be uppermost on the sides.

B16.3 SAE Logo
The SAE logo must be displayed on the front and/or both sides of the vehicle in a prominent location. SAE logo stickers will be provided to the teams on site.

B16.4 Technical Inspection Sticker Space
B16.4.1 Technical inspection stickers will be placed on the upper nose of the vehicle. Cars must have a clear and unobstructed area at least 25.4 cm wide x 20.3cm high (10” x 8”) on the upper front surface of the nose along the vehicle centerline.

B16.4.2 Vehicles that are being entered into multiple competitions in the FSAE series must allow sufficient space along the nose centerline for all inspection stickers.

ARTICLE 17: EQUIPMENT REQUIREMENTS

B17.1 Driver’s Equipment
The following equipment must be worn by the driver anytime he or she is in the cockpit with the engine running:

a. Helmet - A well-fitting, closed face helmet that meets one of the following certifications and is labeled as such:
   - SFI 31.2A, SFI 31.1/2005
   - FIA 8860-2004
   - British Standards Institution BS 6658-85 Type A/FR rating (Types A and B are not accepted)

Open faced helmets are not approved.
All helmets to be used in the competition must be presented during Technical Inspection where approved helmets will be stickered. The organizer reserves the right to impound all non-approved helmets until the end of the competition.

b. Suit - A fire resistant suit that covers the body from the neck down to the ankles and the wrists. The suit must be in good condition, i.e. it must have no tears or open seams, or oil stains that could compromise its fire resistant capability. The suit must be certified to one of the following standards and be labeled as such:

- SFI 3-2A/1 (or higher)

- FIA Standard 1986

- FIA Standard 8856-2000

c. Gloves - Fire resistant gloves which are free of any holes. Leather gloves are not acceptable.
d. Eye Protection - Goggles or face shield, made of impact resistant materials.
e. Shoes - Shoes of durable fire resistant material and which are free from any holes.
f. Arm restraints - Certified and labeled to SFI standard 3.3, or a commercially manufactured equivalent, and worn such that the driver can release them and exit the vehicle unassisted regardless of the vehicle’s position.
g. Hair Covering - A head, hair and neck covering (balaclava) of accepted fire resistant material, e.g. a Nomex balaclava, or a full helmet skirt of accepted fire resistant material. **Note: This applies to ALL drivers.**
h. Socks – Socks made from an accepted fire resistant material, e.g. Nomex that cover the bare skin between the driver’s suit and the boots or shoes. Socks made from wool or cotton is acceptable. Socks of nylon or polyester are not acceptable.

**B17.2 Fire Extinguishers**

B17.2.1 Each team must have at least two (2) 0.9 kg (2 lb.) dry chemical/dry powder or 1.75 litres Aqueous Film Forming Foam (AFFF), fire extinguishers.
B17.2.2 The following are the minimum ratings, any of which are acceptable at any Formula SAE Series event:
- USA, Canada & Brazil: 10BC or 1A 10BC
- UK, Italy & Europe: 34B or 5A 34B
- Australia: 20BE or 1A 10BE
Extinguishers of larger capacity (higher numerical ratings) are acceptable.

B17.2.3 All extinguishers must be equipped with a manufacturer installed pressure/charge gauge.

B17.2.4 Except for the initial inspection, one extinguisher must readily be available in the team’s paddock area, and the second must accompany the vehicle wherever the vehicle is moved. Both extinguishers must be presented with the vehicle at Technical Inspection.

B17.2.5 As a team option, commercially available on-board fire systems are encouraged as an alternative to the extinguisher that accompanies the vehicle.

B17.2.6 Hand held fire extinguishers are not permitted to be mounted on or in the car.

**Note:** Halon extinguishers and systems are prohibited.
ARTICLE 18: POSSIBLE FUTURE RULES CHANGES

NOTICE OF POSSIBLE RULE CHANGES FOR THE 2011 FORMULA SAE SERIES

This section is intended to provide teams with advance notice of possible changes to the Formula SAE Rules that are being considered by the Formula SAE Rules Committee. Only changes that might have a significant influence on a team’s engineering design and manufacturing decisions are listed.

The changes presented in this section are only possibilities and may not be implemented. This section is provided for information and is not intended to be the final text of the rules under consideration.

At this time the Rules Committee does not anticipate making any changes in the 2011 Formula SAE Rules that will significantly alter vehicle designs. However, teams should be aware of the following items:

Article 3 “Driver’s Cell” – For 2011 or later, the Rules Committee is planning to restructure the rules covering space frames. The revision will not change the essential requirements of the frame rules, but will simplify them and make them easier to understand.

Article B.3.9.4 – Due to “discussions” the technical inspectors have had recently with some teams about the location of “Percy’s” hips (the bottom 200 mm diameter circle in B.3.9.3, B.3.9.4 and Figure 2), the rules committee is contemplating specifying a minimum straight line distance between the center of this circle and the rearmost face of the pedals for the “Percy” check. Based on some survey work this past season, more of which is planned in 2010, this minimum distance would be in the range of 91 – 92 cms (35.8 – 36.2 inches). With adjustable pedals, the pedals would be placed in their most forward position.

B.9.6 Fuel Tank Filler Neck and Sight Tube – Revision – The requirements for the fuel tank filler neck will be changed to simplify the fueling procedure and increase the accuracy of the Fuel Economy refill measurement. This change makes the sight tube optional and standardizes the upper filler neck. The filler neck maximum angle from vertical will be revised to 30 degrees maximum and the geometry of the fill neck will be specified to allow for attachment of the single-point refueling rig. The draft rule and technical drawing for the fill neck and required clearance zone will be published to the SAE website for comment. A commercially available fill neck and cap will be chosen so it can be purchased. A drawing will also be posted so teams can manufacture it themselves, if desired.

Seat Back Angle – The possible limit on seat back angle that was under discussion by the committee last year will not be implemented. However, the driver’s belt requirements for seats reclined more than 30 degrees have been modified. See Rules B.5.1 to B.5.5.
2010 Formula SAE Rules

APPENDIX B-1  
FSAE™ STRUCTURAL EQUIVALENCY FORM

This form must be completed and submitted by all teams no later than the date specified in the Action Deadlines on specific event website. The FSAE Technical Committee will review all submissions which deviate from the FSAE® rules and reply with a decision about the requested deviation. All requests will have a confirmation of receipt sent to the team. Structural Equivalency Forms (SEF) and supporting calculations must be submitted electronically in Adobe Acrobat Format (*.pdf). The submissions must be named as follows: schoolname_sef.pdf using the complete school name. Please submit to the person indicated in the Action Deadlines for each event.

*In the event that the FSAE Technical Committee requests additional information or calculations, teams have one week from the date of the request to submit the requested information.

Team Contact_______________________________E-mail Address________________________________
Faculty Advisor_______________________________E-mail Address_______________________________

Is proof of equivalency for your design required for any of the rules?
__Yes. Alternative material was used to that specified in B.3.3.1
__No. Chassis did not deviate from baseline requirements

Attachment Checklist (make sure all are included in your report)

✓ Receipt, letter of donation or proof for non-steel materials (composite, honeycomb, resin, etc).
✓ Properties for all non-steel materials
✓ Monocoque Laminate Testing data and pictures
✓ Holes drilled in any regulated tubing require a deviation, include area and moment of inertia

ATTACH PROOF OF EQUIVALENCY

Please see "Structural Equivalency Guide" on SAE website for more information about the proof of equivalency.

TECHNICAL COMMITTEE DECISION/COMMENTS

Approved by________________________________________ Date_____________

NOTE: THIS FORM AND THE APPROVED COPY OF THE SUBMISSION MUST BE PRESENTED AT TECHNICAL INSPECTION AT EVERY FORMULA SAE EVENT ENTERED

© 2009 SAE International. All Rights Reserved. Printed in USA. 2010 Formula SAE Rules
ARTICLE 1: STATIC EVENTS AND MAXIMUM SCORES

The maximum possible scores in the static events are:
- Technical Inspection: No Points
- Cost and Manufacturing: 100 Points
- Presentation: 75 Points
- Design: 150 Points
- Total: 325 Points

ARTICLE 2: TECHNICAL INSPECTION

C2.1 Objective of Technical Inspection
The objective of technical inspection is to determine if the vehicle meets the FSAE Rules requirements and restrictions and if, considered as a whole, it satisfies the intent of the Rules.

C2.1.1 For purposes of interpretation and inspection the violation of the intent of a rule is considered a violation of the rule itself. (See Rule A.3.6)

C2.1.2 Technical inspection is a non-scored activity.

C2.2 Inspection & Testing Requirement
Each vehicle must pass all parts of technical inspection and testing, and bear the inspection stickers, before it is permitted to participate in any dynamic event or to run on the practice track.

C2.2.1 All items on the Inspection Form must be clearly visible to the technical inspectors.

C2.2.2 Visible access can be provided by removing body panels or by providing removable access panels.

C2.3 Team Responsibility
Teams are responsible for confirming that their vehicle, and the required equipment, satisfies the requirements and restrictions of the FSAE Rules before presenting it for Technical Inspection.

C2.3.1 Presenting a vehicle for Technical Inspection constitutes a declaration by the team that they have determined by self inspection that the vehicle complies with the Rules.

C2.4 Items to be Inspected
The following items must be brought to Technical Inspection:
- Vehicle
- Dry and wet tires
- Driver’s equipment including helmets, suits, gloves, eye protection, hair protection equipment, socks, shoes for all drivers.
- Fire extinguishers
- Push bar
- Structural Equivalency Form copies
• Technical Inspection Form
• All drivers must be present at inspection.

C2.5 Technical Inspection Procedure
Technical inspection will examine all items included on the Inspection Form found on the SAE website plus any other items the inspectors may wish to examine to ensure conformance with the Rules. The exact procedures and instruments employed for inspection and testing are entirely at the discretion of the Chief Technical Inspector.

C2.5.1 Decisions of the inspectors and the Chief Technical Inspector concerning vehicle compliance are final and are not permitted to be appealed.

C2.6 Inspection Condition
Vehicles must be presented for technical inspection in finished condition, i.e. fully assembled, complete and ready-to-run. Technical inspectors will not inspect any vehicle presented for inspection in an unfinished state.

Note: Cars may be presented for technical inspection even if final tuning and set-up has not been finished.

C2.7 Inspection Process
Vehicle inspection will consist of three separate parts as follows:

C2.7.1 Part 1 – Scrutineering
Each vehicle will be inspected to determine if it complies with the requirements of the rules. This inspection will include examination of the driver’s equipment (Rule B.17.1) and a test of the driver egress time (Rule B.4.8).

Part 1 must be passed before a vehicle may apply for Part 2 and Part 3 inspection.

C2.7.2 Part 2 – Tilt Table Tests
Each vehicle will be tested to insure it satisfies both the forty-five degree (45°) fuel and fluid tilt requirement (Rule B.9.9) and the sixty degree (60°) tilt table requirement (Rule B.6.7).

Parts 1 and 2 must both be passed before a vehicle may apply for Part 3 inspection.

C2.7.3 Part 3 – Noise, Master Switch, and Brake Tests
Noise will be tested by the specified method (Rule B.10.2). If the vehicle passes the noise test then its master switches will be tested (see Rule B.11.1). If the vehicle passes both the noise and master switch tests then its brakes will be tested by the specified method (see Rule B.7.2).

C2.8 Correction and Re-inspection
C2.8.1 If any part of a vehicle does not comply with the Rules, or is otherwise deemed to be a concern, then the team must correct the problem and have the car re-inspected.

C2.8.2 The judges and inspectors have the right to re-inspect any vehicle at any time during the competition and require correction of non-compliance.

C2.9 Inspection Stickers
Inspection stickers issued following the completion of any part of Technical Inspection will be placed on the upper noise of the vehicle as specified in Rule B.16.4 “Technical Inspection Sticker Space”.

© 2009 SAE International. All Rights Reserved. Printed in USA. 2010 Formula SAE Rules
C2.9.1 Inspection stickers are issued contingent on the vehicle remaining in the required condition throughout the competition.

C2.9.2 Inspection stickers may be removed from vehicles that are not in compliance with the Rules or are required to be re-inspected.

C2.10 “As-Approved Condition”
Once a vehicle has passed inspection, except as specifically allowed under Rule B.1.2 “Modification and Repairs”, it must remain in the “As-approved” condition throughout the competition and must not be modified.

C2.11 Inspection Validity
Technical approval is valid only for the duration of the specific Formula SAE competition during which the inspection is conducted.

ARTICLE 3: COST AND MANUFACTURING EVENT

Important Notice: Additional information about the Cost and Manufacturing Event including Cost Tables, Software downloads, authentication number instructions and other information can be obtained from the “Dedicated Cost Website” linked off the Formula SAE Rules and Important Documents page on SAE’s Event Website.

C3.1 Event Objective
The objectives of the Cost and Manufacturing Event are:
   a. To teach the participants that cost and budget are significant factors that must be considered in any engineering exercise.
   b. For teams to make trade off decisions between content and cost based on the performance advantage of each part and assembly.
   c. To gain experience with creating and maintaining a Bill of Material (BOM).
   d. For the participants to learn and understand the principles of Design for Manufacture and Assembly, lean manufacturing and Minimum Constraint Design.

C3.2 Rules Objective
The objectives of the Cost and Manufacturing Event rules are:
   a. To provide a logical, simple and time efficient rule set enabling students to achieve the event’s objectives.
   b. To improve fairness by providing consistent pricing guidelines independent of team geographical location by using standardized Cost Tables.
   c. To require the minimal burden of supporting documentation such as receipts or catalog pages. However, in order to convey design information to cost judges engineering documentation (drawings, process descriptions, etc) are required.

C3.3 Event Requirements
This event is comprised of three (3) parts

C3.3.1 Part 1 “Cost Report”
The preparation and submission of a report (the “Cost Report”), which is to be sent to the Cost Judges prior to the competition. See C.3.8.
C3.3.2 Part 2 “Discussion”
A discussion at the Competition with the Cost Judges around the team’s vehicle. See Section C3.21. This evaluates not only the cost of the car, but also the team’s ability to prepare accurate engineering and manufacturing cost estimates.

C3.3.3 Part 3 “Real Case”
A “real case” scenario where students will have to respond to a challenge related to cost or manufacturing of the student vehicle.

C3.4 Formula SAE Michigan & Formula SAE California Reports
Teams that are entering more than one North American competition may submit one (1) Cost Report covering all the competitions entered providing that (a) the report properly identifies the competition names and car numbers and (b) any addenda necessary to cover changes or modifications made to the vehicle between events is properly completed and submitted.

C3.5 Definitions
The following definitions will apply throughout the Cost Event rules:

C3.5.1 Adjusted Cost – The final cost for the vehicle including penalties
C3.5.2 Amended Cost – The cost of the vehicle after modification by the competition addendum
C3.5.3 Bill of Material – A hierarchical list of all parts of the vehicle. A BOM lists every item that is on the vehicle but also shows the relationships between these items, for example showing the parts that make up an assembly. A Costed Bill of Material (CBOM) is a standard BOM that includes cost information including cost of purchased parts, raw materials and processes that go into manufacturing the vehicle.
C3.5.4 Category - Each table has numerous entries which describe a classification of entry. For example there are several types of hose clamps, and all have various costs. The category of hose clamp may be worm drive, constant tension, etc.
C3.5.5 Cost – The cost for each item from the materials table is simply the quantity multiplied by the unit cost.
C3.5.6 Cost Report – All materials, including electronic and hard copy, submitted for judging
C3.5.7 Cost Score – Refers to the total number of points out of 100 earned in the Cost Event
C3.5.8 Cost Tables – All tables that list costs for objects and processes
C3.5.9 Design for Manufacture and Assembly (DFMA) – The process where parts are designed for ease of manufacture and assembly, resulting in lower cost.
C3.5.10 Fasteners Table – A Cost Table that consists of not only traditional fasteners such as bolts, nuts and rivets but also adhesives, hose clamps and retaining rings.
C3.5.11 Fixed Cost – Costs associated with production that are independent of volume produced. Fixed cost items, such as tooling, are converted to variable costs when included in the Cost Report.
C3.5.12 Initial Cost – The cost of the vehicle submitted for initial judging in the Cost Report.
C3.5.13 Lean Manufacture – A methodology for producing goods that emphasizes the elimination of waste and improvement in process flow with the goal of optimizing the cost and quality of goods.

C3.5.14 Materials Table – Lists the costs for raw materials used to manufacture parts built by the teams and also of finished parts purchased by the teams.

C3.5.15 Minimum Constraint Design (MCD) – A design methodology emphasizing elimination of redundant constraints in the attachment of parts. Each part requires constraint in six degrees of freedom and additional constraints can make assembly difficult, force tight tolerances and increase the cost of manufactured goods.

C3.5.16 Parameters – Used to create an equation describing the cost of an object as a function of some characteristic of that object. For example the cost of steel is proportional to the mass (or volume) of steel. In this case steel has been parameterized by mass. Rubber hose could be parameterized by diameter. The equations can be linear or non-linear and both 1st and 2nd order equations are used as necessary to build the Cost Tables.

C3.5.17 Process Multipliers - Modify the standard costs of different operations to account for material and geometric differences in the part.

C3.5.18 Purchased Parts – Also called bought parts; these items are listed in the Cost Tables in a near as-installed condition. For example wheels, engines and turbochargers are purchased parts. In some cases purchased parts may still require additional processing before they can be assembled to the car. Wheels, for example, do not include the machined features for mounting to the hub. Purchased parts do not include fasteners unless specifically noted in the Cost Tables.

C3.5.19 Quantity – The amount of the item

C3.5.20 Raw Materials – Materials used for manufacturing parts, such as aluminum, steel and rubber hose.

C3.5.21 Tools – Tools refer to hand or power tools used to assemble the vehicle. The costs of these tools are not included in the Cost Report. The effect of the tools used for assembly are captured in the process tables for labor as different costs are given based on the tools used for assembly.

C3.5.22 Tooling - Is the production tooling associated with processes that are specific to the part geometry. The costs of tooling must be included in the Cost Report. For example the dies to stamp out a chassis bracket are tooling. The press used to stamp the bracket is not, and is considered production equipment which is not part of the Cost Event.

C3.5.23 Unit – Is the measurement system used to define the quantity of a parameter. For example millimeters and kilograms are units. The hose clamp diameter unit is mm. When calculating the cost of the clamp the unit of measurement used by the team must match the Unit specified in the tables. For example a US team mistakenly calculates the hose clamp cost by using the expression with a diameter of 1, because their radiator hose is 1 inch in diameter. They should have used 25.4mm for the diameter and their cost is wrong because of it. For the penalties associated with this type of error see C.3.18

C3.5.24 Unit Cost – Is the cost for something assuming a numerical value of one (1) of the unit used to measure the item. The cost is the quantity of an item multiplied by the unit cost.
C3.5.25 Variable Cost – Is a cost associated with production that is proportional to the vehicle volume produced. All costs submitted with the Cost Report will be variable costs.

C3.6 General Requirements
C3.6.1 The Cost Report must:
   a. Use the standardized Cost Tables. The tables are designed to reflect a hypothetical car built for production at the annual volume of 1000 units per year.
   b. List and cost every part on the prototype vehicle. This includes any equipment fitted on the vehicle at any time during the competition. The only exceptions are that, per C.3.22 “Cost Report Exempt Items” of the Rules, the cost of any finish, on-board fire suppression system, rain tires, or “stand-alone” data acquisition, video or radio system, does not need to be included in the Cost Report.
   c. Be based on the estimated costs of materials, fabrication, purchased parts, and assembly of the car. The costs shall be calculated as defined in these rules.
   d. Be based on the actual manufacturing technique used on the prototype, e.g. cast parts on the prototype must be cost as cast, and fabricated parts as fabricated, etc.
   e. Include tooling (e.g. welding jigs, molds, patterns and dies) for processes requiring it.
   f. Exclude R & D and capital expenditures (e.g. plant, machinery, hand tools and power tools).

Note: There is no maximum cost. Receipts are not required for any items.

C3.6.2 The Cost Tables have been designed to:
   a. Be verifiable at the event. Differentiating between different types of materials (for example different alloys of steel) is not possible so no differentiation is made in the table cost.
   b. Minimize influence on safety equipment content. For example driver harnesses are cost independent of the style chosen.
   c. Higher costs of some goods must reflect actually higher value of those goods. However, the costs must still allow for team innovation and vehicle content, with some reduction in cost score.

C3.7 Scoring
The points for the Cost and Manufacturing Event will be broken down as follows:

<table>
<thead>
<tr>
<th>Formula</th>
<th>Points</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(40 \times \frac{(P_{\text{max}} - P_{\text{your}})}{(P_{\text{max}} - P_{\text{min}})} - 1)</td>
<td>40 Points</td>
<td>Lowest cost - each of the participating schools will be ranked by total adjusted cost from the BOM and given 0-40 points based on the formula on the left.</td>
</tr>
<tr>
<td></td>
<td>40 Points</td>
<td>Accuracy, Clarity &amp; Event Day/Visual Inspection - The cars will be reviewed for part content, manufacturing feasibility and accuracy of the cost information. Supporting documentation will be assessed based on its quality, accuracy and thoroughness. The range for the score is 0-40 points.</td>
</tr>
<tr>
<td></td>
<td>20 Points</td>
<td>Event Day/Manufacturing Processes - The teams must be prepared to discuss in detail the “real case” scenario distributed prior to the competition. The materials will include more specifics about the goal and scoring of the scenario. The range for the score is 0-20 points.</td>
</tr>
<tr>
<td>Total</td>
<td>100 Points</td>
<td></td>
</tr>
</tbody>
</table>

Where:
Pyour is the adjusted cost of your car (with penalties) in dollars.
Pmin is the adjusted cost of the lowest cost car in dollars.
Pmax is the cost of the highest cost car in dollars.

### C3.8 Cost Report

#### C3.8.1 The Cost Report consists of a full vehicle BOM with cost data derived from the Cost Tables and supporting documentation. The Cost Report must be submitted in two (2) forms:

- **Electronic Version** – The electronic version must be identified as follows:
  - Carnumber_schoolname_competitioncode_CR.xls using the assigned car number, the complete school name and the competition code.
  - Example: 087_University of FSAE_FSAEM_CR.xls

  **Competition Codes are listed in Rule A.2.6**

  **Note:** Teams entered into a competition using the Cost Application (See B3.24) need not submit a separate electronic file as usage of the software and synchronization of the local data with the FSAE server before the deadline meets the full requirement for electronic submission.

- **Hard Copy** – The hard copy Cost Report must be in a ring binder with 8.5” x 11” or A4 pages.

  **Note:** Some competitions may waive the hard copy requirement. If so, the waiver will be published on the SAE website.

#### C3.8.2 Cost Report Identification

The cover of the Cost Report must include the following:

- university name,
- competition name, and
- vehicle number.

**Note:** Teams that are submitting a single Cost Report covering more than one North American competition must identify their report as follows:

- University Name (full name)
- Formula SAE Michigan, Car # XXX and Formula SAE California, Car #YYY

#### C3.8.3 The Cost Report must consist of the following:

- A Cover sheet
- A Table of Contents
- A Cost Summary page listing each section’s cost, and the total vehicle cost
- Eight commodity report sections with the parts placed in the sections as specified in Appendix C-3.
- Tabs for each section

**Note:** Teams entered into a competition using the Cost Application (See B3.24) should still include the items above but the cost summary pages can be printed directly from the application.

### C3.9 Bill of Materials (BOM)

The BOM is a parts list for every vehicle part. It also shows the relationships between the items.

#### C3.9.1 The following terminology will be used when referring to the BOM.

- The overall vehicle is broken down into eight (8) systems which are defined in Appendix C-3.
- Systems are made up of Assemblies.
- Assemblies are made up of Parts.
- Parts consist of materials, processes and fasteners.
- Tooling is associated with each process that requires production tooling.
C3.9.2 An example BOM structure is shown below:

- Engine & Drivetrain
  - Engine
  - Differential
- Housing
- Aluminum
- Needle Bearing
- Sand cast
- Die & Core Package #4
- Machining-Turn
- Weld
- M6x1.25 Grade 8.8
- Internals
- End Cap

The BOM must follow the format given above. There must be no other BOM levels added or any removed. Deviations from the structure published will be penalized per Section C.3.17.

C3.9.3 All assemblies, parts and fasteners in the BOM must use a standard numbering convention explained in Appendix C-2.

C3.10 The Cost Tables

C3.10.1 All costs in the Cost Report come from the standardized Cost Tables. These tables have been compiled to represent the cost of parts and processes that a manufacturing company could be expected to pay for manufacturing a vehicle at 1000 units per year. Generally, the tabulated value represents ½ of the Manufacturer’s Suggested Retail Price (MSRP) for finished parts. Raw materials, commodities and fasteners also intended to represent the production volume of a company rather than the purchase price of the University teams.

C3.10.2 Requests to alter the cost of goods in the tables because of changing world markets or individual team purchase price will not be approved. The tables are intended to provide a fair, unchanging (within a given competition year) cost for parts and to reduce regional variations in price that may help or hurt certain teams. All teams must use the costs given in the tables. If a team wishes to use any parts, processes or materials not included in the tables an “Add Item Request” must be submitted as per Section C.3.13.

C3.10.3 The tables represent cost based on specific parameters. For example the cost of steel is given per unit of volume (or mass). Likewise, engine costs are listed by displacement and specific power output.

C3.10.4 The following Cost Tables are used

- Materials
- Processes
- Process Multipliers
- Fasteners
- Tooling

C3.10.5 In general, most items have a cost expressed as a function of one parameter. In cases where more than one parameter is necessary additional categories are listed. For example the power output of the engine has three Categories and for each Category a different expression calculates the cost as a
function of the engine displacement, which is the Parameter. The Unit would be cubic centimeters in this case.

C3.10.6 Process Multipliers are used to modify the standard costs of different operations to account for material and geometric differences in the part. For every process included in the Cost Report the list of process multipliers must be checked to determine if any apply, and if they do their effect on the cost must be included.

C3.10.7 When adding items from tables to the BOM the comments section should be reviewed thoroughly to understand what is included in the table entry. For example is the spring included in the damper cost? Do the spark plugs come with the engine or are they a separate line item? In cases where the explanation is not clear please contact the Rules Committee for clarification.

C3.11 Cost Models & Costing Methodology

The cost models are the underlying methodology and equations that relate the final cost of a part or process to the different operations and goods used in that part. The detailed explanation of the Cost Models and Costing Methodology is included in Appendix C-1 and should be referenced for understanding the use of the Cost Tables.

C3.12 Make Versus Buy

Every part on an individual car can be classified as “made” or “bought”. This designation does not necessarily refer to whether a team actually purchased or fabricated a part but is a reflection of how the part must be cost from the Cost Tables.

a. Made (or manufactured) parts must be cost as if the company manufacturing the vehicle was going to make the part internally. That is by purchasing raw materials and processing them into a finished product.

b. Bought parts must be cost as if the company manufacturing the vehicle was going to outsource the fabrication of that part. These parts would be received by the vehicle manufacturer in a relatively finished state (see the particular table entry comments field for specific information).

C3.12.1 The Cost Tables have been constructed as a tradeoff between complexity for the organizers and fairness for the teams. The make versus buy designation enables certain parts to be simplified to a relatively few number of entries. For example some teams may purchase axles but the majority of teams manufacture them. Axles are designated “make” parts so teams that purchase axles must cost them as if they had made them starting with the raw materials, in this case probably steel tubing. Made parts can be distinguished because they do not appear explicitly in the Cost Tables or appear with a “cost as made” option.

C3.12.2 If a team genuinely makes a part listed on the table as a bought part they may alternatively cost it as a made part if and only if a placeholder entry is listed in the tables enabling them to do so. For example, in the category of dampers a “student built” entry is included. This line item must be included in the BOM (it has zero cost). Then they must proceed to cost the damper they actually designed and built.
C3.12.3 A table summary of options is given below:

<table>
<thead>
<tr>
<th>How Table Lists Part</th>
<th>Team Made</th>
<th>Team Bought</th>
</tr>
</thead>
<tbody>
<tr>
<td>Table Lists Part as &quot;Made&quot;, or Part is not Listed in the Tables</td>
<td>Cost as &quot;Made&quot;</td>
<td>Cost as &quot;Made&quot;</td>
</tr>
<tr>
<td>Table Lists Part as &quot;Bought&quot;</td>
<td>Team made option NOT in table cost as &quot;Bought&quot;. If team made option in table team can choose either &quot;Bought&quot; or &quot;Made&quot;</td>
<td>Cost as &quot;Bought&quot;</td>
</tr>
</tbody>
</table>

C3.12.4 For example a snap ring does not have a “team made” entry in the Cost Tables. A team who made their own would still have to use the table cost based on diameter, even if they could cost it less expensively by buying steel and processing it.

C3.12.5 Any part which is normally purchased that is optionally shown as a made part must have supporting documentation submitted to prove team manufacture. This might include engineering drawings, pictures of machining, etc. Teams found costing bought parts as made parts will be penalized appropriately.

C3.13 Add Item Request
C3.13.1 The costs tables are intended to include all materials, processes and fasteners needed by the teams to accurately reflect the content, manufacture and assembly of their vehicle. However, it will be necessary to add items to the tables to suit individual team requirements. To do this an “Add Item Request” must be submitted to the Rules Committee. After review the item will be added to the tables with the next table update with a cost appropriate to the overall Cost Table framework and spirit of the competition.

The tables will be updated throughout the competition year as required.

C3.13.2 The form should be completely filled out and contains the necessary instructions. Some supporting documentation will be required such as receipts or website links. The Add Item request is the only time receipts will be needed for the Cost Event.

Note: Since all teams work off the same tables once a team requests an item be added to the tables all teams will see the addition. Any team using the newly added item will use the same cost. The identity of the school that made the request will not be published.

C3.14 Report Submission and Deadline
a. The Cost Report must be submitted in the designated format for each event.
b. For some events, a printed copy of the report must also be submitted and must be on 8 1/2 inch x 11 inch or A4 size paper, using a 10-point font size or larger.
c. Submission Address and Deadline – The submission requirements, address and deadline will be published in the appendix or released on the website of the specific competition.

C3.15 Late Submission of Cost Report
It is imperative that the cost judges have the Cost Reports in enough time for proper evaluation. Teams that submit reports late will be penalized 10 points per day late, with a maximum penalty of 80 points. Teams that do not submit a Cost Report will receive negative 100 points for the Cost & Manufacturing Analysis score. Penalties will be applied based on official upload date and time for electronic submission and by post mark for printed submissions.

C3.16 Addenda
C3.16.1 An addendum that reflects any changes or corrections made after the submission of the Cost Report must be submitted at Registration when the Team registers on-site at the Event. It will not be accepted at any other time or place. The addendum document must follow the template format specified in Appendix C-5. No other format will be accepted.

C3.16.2 A separate addendum is permitted for every competition a vehicle attends.

C3.16.3 Any items added to the Cost Report through addenda will be cost at 1.25 times the table cost. Any items removed through addenda will only be credited 0.75 times the table cost.

Note: Late changes to designs impact costs in the real world. Contracts need to be altered, commodity costs can change, cancellation fees may be incurred and information needs to be transmitted to suppliers. The scaling factors for the addenda capture this as well as encourage teams to submit full and accurate information with the initial Cost Report.

C3.17 Cost Report Judging and Penalties Process
C3.17.1 The following procedure will be used in determining penalties:
1. Penalty A will be calculated first using procedure C.3.18
2. Penalty B will then be calculated using alternative procedure C.3.19
3. The greater of the two penalties will be applied against the cost score
   a. Penalty A expressed in points will be deducted from the Accuracy score
   b. Penalty B expressed in dollars will be added to the Adjusted Cost of the vehicle
4. If no additional points remain to be deducted from the Accuracy score the penalty will be applied using method B against the Adjusted Cost

C3.17.2 If the alternative penalty is used because no additional accuracy points remain then the highest of the A type penalties will be converted to B type penalties. In effect, the order the penalties are calculated and applied against the team does not matter.

C3.17.3 Any error that results in a team over reporting a cost in their Cost Report will not be further penalized.
For example, when the Cost Report is prepared the thickness of the brake rotors has not yet been determined. The team conservatively costs the rotors as 10mm thick. The final thickness is 8mm and no change is made in the addendum. The team rotor price is higher than necessary but no penalty is applied.

Note: The penalty system is intended to reward accuracy and minimize workload at the competition for students and judges. In most cases the standard points deductions will be made to the accuracy score.
Note: Any instance where a team’s score benefits by an intentional or unintentional error on the part of the students will be corrected on a case by case basis.

C3.18 Penalty Method A- Fixed Point Deductions
C3.18.1 From the Bill of Material, the cost judges will determine if all parts and processes have been included in the analysis. In the case of any omission or error the judges will add a penalty proportional to the BOM level of the error. The following standard points deductions will apply:
- Missing/inaccurate material, process, fastener ………………… 1 pt.
- Missing/inaccurate part ………………………………………….. 3 pt.
- Missing/inaccurate assembly ……………………………………. 5 pt.

Note: Each of the penalties listed above supersedes the previous penalty. If a 5 point deduction is given for a missing assembly the missing parts are ignored for Method A. Method B would include the cost of the missing parts in the calculation.

C3.18.2 Differences other than those listed above will be deducted at the discretion of the cost judges. Examples of errors leading to points deductions:
- Five M6 fasteners listed, six used – 1 pt.
- Three kilograms of steel listed, 4.4 used – 1 pt.
- Bearing carrier face machined, mill operation not included – 1 pt.
- Installation labor for steering wheel missing – 1 pt.
- Upright cost as cast but actual part billet machined – 3 pt.
- Pneumatic shifter not included on BOM – 5 pt.

The penalties above will be deducted from the points awarded for Accuracy of the Cost Report.

C3.19 Penalty Method B – Adjusted Cost Deductions
The alternative penalty will be calculated using the following equation:

$$\text{Penalty} = 2 \times (\text{Table Cost} - \text{Team Reported Cost})$$

The table cost will be calculated from the standard Cost Tables. The penalty calculation will result in a dollar value equal to twice the difference between the team cost and the correct cost for all items in error.

This penalty, if applied, will be made to the Adjusted Cost of the vehicle.

Note: The table costs of all items in error are included in the calculation. A missing assembly would include the price of all parts, materials, processes and fasteners making up the assembly.

C3.20 Penalty Calculation Example
For example the pneumatic shifter was inadvertently left off the Cost Report. As this is an assembly the standard error is 5 points. The cost of all air shifter parts and processes from the Cost Tables is $500. This means the total penalty cost is $1000. To see which is greater, 5 points or $1000, the dollar penalty needs to be converted to points by reference to the Cost Points formula:

$$\text{Points} = 40x\left[\frac{P_{\text{max}}}{P_{\text{your}}} - 1\right] \div \left[\frac{(P_{\text{max}}/P_{\text{min}}) - 1}{(P_{\text{max}}/P_{\text{min}}) - 1}\right]$$
Substitute the cost of the vehicle (Pyour) with $15,000 while the minimum vehicle cost (Pmin) was $10,000. The maximum vehicle cost (Pmax) was $50,000. Calculating the points equivalent for this dollar amount yields 2.5 points. This is less than the standard penalty. In this case the 5 points would be deducted from the Accuracy score.

If the team had made many small errors and had no more accuracy points available then the $1000 would be added to the team’s adjusted cost.

C3.21 Discussion at the Competition
C3.21.1 At this discussion, the Cost Judges will:
   a. Review whether the specification of the vehicle in the Cost Report accurately reflects the vehicle brought to the Competition
   b. Review the manufacturing feasibility of the vehicle
   c. Assess penalties for missing or incorrect information in the Cost Report compared to the vehicle presented at inspection.

C3.21.2 The team must present their vehicle at the designated time to the Cost Judges for review of the Cost Report. Teams that miss their cost appointment will potentially lose all cost points for that day. The schedule for these appointments will be in the registration packets and/or posted on the website.

C3.22 Cost Report Exempt Items
C3.22.1 Finishes
   The car will be considered to be shipped as primed or gel coated and a cost recorded. Any finishes (paint, polish, etc.) that are only used to beautify need not be costed. Preservative finishes intended to protect the appearance or function of a part for an extended period of time must be costed (labor and material included).

C3.22.2 Fire Extinguisher and Suppression System
   Hand held fire extinguishers are not allowed on the vehicle (See Rule B.17.2 “Fire Extinguishers”), but if the car has an on-board fire suppression system, it is not required to be costed.

C3.22.3 Tires and Wheels
   Only one set of tires and wheels needs to be included in the Cost Report. The tires and wheels that are declared as dry tires per rule B.6.4 “Tires” must be the tires included in the Cost Report, and must be the tires on the car during the Cost Event judging. Other tires that will be potentially used at the competition (i.e. rain tires) do not need to be included in the Cost Report.

C3.22.4 Transponders, Data Acquisition, Video and Radio Systems
   Transponders, “stand-alone” data acquisition, video and radio systems, and their associated sensors, need not be included in the Cost Report. A “stand-alone” system is one that can be removed from the vehicle without affecting the vehicle’s ability to perform. Teams that claim to be using a “stand-alone” system may be required to remove the system to substantiate their claim.

C3.23 Exchange Rates & Unit Systems
   The currency of the Cost Report will be referred to as dollars. Since all items have a cost from the Cost Tables the actual currency unit is irrelevant.

C3.23.1 All Cost Tables are presented using metric units. The tables do not differentiate between parts designed in metric and US systems of measure. For example a ¼ bolt is simply input as a 6.35mm bolt. Tubing with a wall thickness of 0.035 inches is input as 0.889mm tubing. All sizes are assumed to be standard for the part being cost and no surcharge applies for any size, even if the size is non-
standard. For example a team makes a custom 6.112mm bolt which took several hours of student
time. However, this bolt is chosen from the Cost Tables and is less than one dollar. The assumption
is in high volume production these bolts would be purchased in bulk.

C3.23.2 The comment section for each material, process or fastener may, at the student’s discretion, refer to
the specific part by actual local designation. For example a 6.35mm bolt is cost but the comments
would say “¼ inch A-arm bolt”.

C3.23.3 Because the Cost Report reflects a production cost for 1000 units per year all material and commodity
sizes are assumed to be available for the necessary volume without cost penalty.

C3.24 Cost Application
The Formula SAE Cost Application (FCA) is a software application written to assist teams with
compiling, preparing and submitting their Cost Report.

3.21.1 The download for the Cost Application along with additional information such as users manuals and
installation instructions can be found on the SAE Website.

3.21.2 The Cost Application requires an authentication number for data entered by the team to be
synchronized with the FSAE server. This authentication number will usually be provided during the
competition registration. If not, then (1) For the North American competitions go to the “Dedicated
Cost Website” found on the “Rules and Important Documents” page of the Formula SAE Website (2)
For competitions outside North America consult the Individual competition website. One
authentication number will be used for all events within a year. It is the team’s responsibility to
protect the security of this number as it controls access to the proprietary team data entered into the
database.

C3.25 Examples
Examples will be posted to the SAE website

ARTICLE 4: PRESENTATION EVENT

C4.1 Presentation Event Objective – Business Case
C4.1.1 The objective of the presentation event is to evaluate the team’s ability to develop and deliver a
comprehensive business case that will convince the executives of a corporation that the team’s design
best meets the demands of the amateur, weekend competition market, including Sports Car Club of
America (SCCA) Solo, and that it can be profitably manufactured and marketed. (See also A.1.2)

C4.1.2 The judges should be treated as if they were executives of a corporation.

C4.1.3 Teams should assume that the “executives” represent different areas of a corporate organization,
including engineering, production, marketing and finance, and thus may not all be engineers.

C4.1.4 Presentations will be evaluated on the contents, organization and visual aids as well as the presenters’
delivery and the team’s response to questions.

C4.1.5 The presentation must relate to the car entered into the competition although the actual quality of the
prototype itself will not be considered as part of the presentation judging.
C4.2 **Presentation Schedule**

C4.2.1 Presentations will be made on the static events day. Presentation times will be scheduled by the organizers and either, or both, posted in advance on the competition website or released during on-site registration.

C4.2.2 Teams that fail to make their presentation during their assigned time period will receive zero (0) points for the event.

C4.3 **Presentation Format**

C4.3.1 One or more team members will give the presentation to the judges.

C4.3.2 All team members who will give any part of the presentation, or who will respond to the judges’ questions, must be in the podium area when the presentation starts and must be introduced to the judges. Team members who are part of this “presentation group” may answer the judge’s questions even if they did not speak during the presentation itself.

C4.3.3 Presentations are limited to a maximum of ten (10) minutes. The judges will stop any presentation exceeding ten minutes.

C4.3.4 The presentation itself will not be interrupted by questions. Immediately following the presentation there will be a question and answer session of up to five (5) minutes.

C4.3.5 Only judges may ask questions. Only team members who are part of the “presentation group” may answer the judges’ questions.

C4.4 **Data Projection Equipment**

C4.4.1 Projection equipment is not provided by the organizers.

C4.4.2 Teams planning to use data projectors, or any type of projectors, as part of their presentation are responsible for bringing, or otherwise arranging for, their own projection equipment.

C4.5 **Evaluation Criteria**

C4.5.1 Presentations will be evaluated on content, organization, visual aids, delivery and the team’s response to the judges’ questions. The scoring criteria are detailed in Appendix C-6 “Presentation Judging”.

C4.5.2 The criteria are applied only to the team’s presentation itself. The team that makes the best presentation, regardless of the quality of their car, will win the event.

C4.6 **Scoring Formula**

C4.6.1 The Presentation Events score is based on the average of the judges’ scores.

C4.6.2 There is a maximum of fifty (50) points from the Presentation Judging Form.

\[
\text{PRESENTATION SCORE} = 75 \times \frac{P_{\text{your}}}{P_{\text{max}}}
\]

Where:
- “Pmax” is the highest score awarded to any team
- “Pyour” is the score awarded to your team

C4.6.3 It is intended that the scores will range from near zero (0) to seventy-five (75) to provide good separation.
C4.6.4 The Presentation Event Captain may at his/her discretion; normalize the scores of different judging teams.

C4.7 Presentations without a completed car
Teams that unable to bring a vehicle to the competition may participate in the Presentation Event and will receive a score for that event.

Note: Participating in the Presentation event without bringing a vehicle to the competition will not affect the status of the car you have under construction at your school. When you finish it and bring it to a competition it will still be a first year vehicle under Rules A6.6 and A6.8

ARTICLE 5: DESIGN EVENT

C5.1 Design Event Objective
C5.1.1 The concept of the design event is to evaluate the engineering effort that went into the design of the car and how the engineering meets the intent of the market.

C5.1.2 The car that illustrates the best use of engineering to meet the design goals and the best understanding of the design by the team members will win the design event.

Comment: Teams are reminded that FSAE is an engineering design competition and that in the Design Event; teams are evaluated on their design. Components and systems that are incorporated into the design as finished items are not evaluated as a student designed unit, but are only assessed on the team’s selection and application of that unit. For example, teams that design and fabricate their own shocks are evaluated on the shock design itself as well as the shock’s application within the suspension system. Teams using commercially available shocks are evaluated only on selection and application within the suspension system.

C5.2 Design Report – Submission Requirements
C5.2.1 Design Report - Judging will start with a Design Review before the event. The principal document submitted for the Design Review is a Design Report.

C5.2.2 The Design Report must not exceed eight (8) pages, consisting of not more than four (4) pages of text, three (3) pages of drawings (see C5.4, “Vehicle Drawings”) and one (1) optional page containing content to be defined by the team (photo’s, graphs, etc…).

C5.2.3 The document should contain a brief description of the vehicle with a discussion of any important design features and vehicle concepts. Include a list of different analysis and testing techniques (FEA, dynamometer testing, etc.). Evidence of this analysis and back-up data should be brought to the competition and be available, on request, for review by the judges.

C5.2.4 These documents will be used by the judges to sort teams into the appropriate design groups based on the quality of their review.

Comment: Consider your Design Report to be the “resume of your car”.

C5.3 Design Spec Sheet – Submission Requirements
C5.3.1 Design Spec Sheet – A completed FSAE Design Spec Sheet must be submitted.
The FSAE Design Spec Sheet template can be found on the FSAE website at: http://www.sae.org/students/fsae-designspecs.xls. Do not alter or re-format the template prior to submission.

The design judges realize that final design refinements and vehicle development may cause the submitted figures to diverge slightly from those of the completed vehicle. For specifications that are subject to tuning, an anticipated range of values may be appropriate.

The Design Report and the Design Spec Sheet, while related documents, should stand alone and be considered two (2) separate submissions. Two separate file submissions are required.

Vehicle Drawings

The Design Report must include one set of 3 view drawings showing the vehicle, from the front, top, and side.

Each drawing shall appear on a separate page. The drawings can be manual or computer generated.

Photos should be placed on the optional page and will not be counted as drawings.

Design Report and Design Spec Sheet Formats

The Design Report must be submitted electronically in Adobe Acrobat® Format (*.pdf file). This document must be a single file (text, drawings, and optional content all inclusive).

The Design Report file must be named as follows: carnumber_schoolname.pdf using the FSAE assigned car number and the complete school name, e.g. 001_University of SAE.pdf

Design Spec Sheets must be submitted electronically in Microsoft Excel® Format (*.xls file). The format of the Spec Sheet MUST NOT be altered.

Similar to the Design Report, the Design Spec Sheet file must be named as follows: carnumber_schoolname_specs.xls using the FSAE assigned car number and the complete school name, e.g. 001_University of SAE_spec.xls

WARNING – Failure to exactly follow the above submission requirements may result in exclusion from the Design Event. If your files are not submitted in the required format or are not properly named then they cannot be included in the documents provided to the design judges and your team will be excluded from the event.

Excess Size Design Reports

If a team submits a Design Report that exceeds four (4) pages of text, three (3) pages of drawing and one (1) optional page, then only the first four pages of text, three pages of drawings and first optional page will be read and evaluated by the judges. Note: If included, cover sheets and tables of contents will count as text pages.

Submission Deadlines

The Design Report and the Design Spec Sheets must arrive at the specified e-mail address by the date shown in the Action Deadlines for the competition your team is entering. E-mail the Design Report and Design Spec Sheets to the address provided in the appendix.
C5.7.2 The two files must be e-mailed as separate files.

C5.7.3 Teams will receive confirmation of receipt via email and/or the event website once report is reviewed for accuracy. Teams should have a printed copy of this reply available at the competition as proof of submission in the event of discrepancy.

C5.8 **Penalty for Late Submission or Non-submission**
Teams that do not submit a Design Report and a Design Spec Sheet by the specified deadline will not compete in the design event, and will receive zero (0) points for design.

C5.9 **Penalty for Unsatisfactory Submissions**
At the discretion of the judges, teams that submit a Design Report or a Design Spec Sheet which is deemed to be unsatisfactory, will also not compete in the design event, but may receive between five (5) and twenty (20) pts. for their efforts.

C5.10 **Design Event – Vehicle Condition**
C5.10.1 Cars must be presented for design judging in finished condition, i.e. fully assembled, complete and ready-to-run.

C5.10.2 The judges will not evaluate any car that is presented at the design event in what they consider to be an unfinished state.

C5.10.3 Unfinished cars that are refused judging will receive zero (0) points for design.

C5.10.4 Point penalties may be assessed for cars with obvious preparation issues, e.g. notably loose or missing fasteners.

Note: Cars can be presented for design judging without having passed technical inspection, and even if final tuning and setup is in progress.

C5.11 **Judging Criteria**
C5.11.1 The design judges will evaluate the engineering effort based upon the team’s Design Report, Spec Sheet, responses to questions and an inspection of the car.

C5.11.2 The design judges will inspect the car to determine if the design concepts are adequate and appropriate for the application (relative to the objectives set forth in the rules).

C5.11.3 It is the responsibility of the judges to deduct points on the design judging form, as given in Appendix C-7, if the team cannot adequately explain the engineering and construction of the car.

C5.12 **Judging Sequence**
C5.12.1 The actual format of the design event may change from competition to competition and year to year as determined by the organizing body.

C5.12.2 All Formula SAE organizing bodies reserve the right to organize Design Judging into one, two or three steps at their sole discretion.

C5.12.3 Three step Design Judging is typically organized as follows:
1. Initial judging of all vehicles
2. Semi-final judging of the top 10 to 20 vehicles
3. Final judging ranking the top 4 to 8 vehicles.
C5.13 Scoring
C5.13.1 Scoring may range from 0 to 150 points at the judge’s discretion.

C5.13.2 The judges may at their discretion award the highest placing team less than 150 points.

C5.14 Support Material
Teams may bring with them to the Design Event any photographs, drawings, plans, charts, example components or other materials that they believe are needed to support the presentation of the vehicle and the discussion of the their development process.

C5.15 Second Year Cars - Penalties for Insufficient Redesign
C5.15.1 Penalties for insufficient redesign are in effect at Formula SAE Australasia, Formula SAE Brazil, Formula SAE Italy, and Formula Student.

C5.15.2 The judges will deduct fifty (50) points from the final design score for cars without a new frame. (see Rule A.6.9) An additional thirty (30) points may be deducted if the photographic and other supporting documentation fails to show that the remaining parts of the vehicle have been significantly changed (e.g. the intake manifold is obviously the same or it is obvious that the old suspension was simply bolted to a new frame, or none of the team members show an understanding of the design of various components).

C5.15.3 If the new frame is similar to last years, it is advisable to bring along evidence of the change (bringing along the old frame is not a bad idea).

C5.15.4 Second year cars are prohibited at the North American FSAE competitions. (see Rule A.6.7)

PRESENTATION JUDGING

SCHOOL _____________________________  CAR NUMBER ______

Score the following categories on the basis of 0-10 points each according to the following scale (any number or fraction along this scale may be used).

<table>
<thead>
<tr>
<th>Score</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.0</td>
<td>inadequate or no attempt</td>
</tr>
<tr>
<td>2.5</td>
<td>attempted but below expectation</td>
</tr>
<tr>
<td>5</td>
<td>average or expected</td>
</tr>
<tr>
<td>7.5</td>
<td>above average but still lacking</td>
</tr>
<tr>
<td>10</td>
<td>excellent, perfectly meets intent</td>
</tr>
</tbody>
</table>

______ CONTENT: Were the concepts presented appropriate and adequate to explain how the car meets the intent of the customer? Were enough technical details presented without being boring?

______ ORGANIZATION: Were the concepts presented in a logical order progressing from basic concept and showing how the engineering accomplished the concept? Was it clear to the audience what was to be presented and what was coming next? Were distinct introduction and overviews as well as summary and conclusions given?

______ VISUAL AIDS: Were visual aids used or clear visual references made to the car? Were the illustrations visible for all of the audience?

______ DELIVERY: Did the presenter speak in a clear voice? Did the presenter show enthusiasm and promote confidence in the technical aspects? Did he maintain eye contact?

______ QUESTIONS: Did the answer illustrate that the team fully understood the question? Is there doubt that the team understood the answer? Did the team promote complete confidence in their response to the questions?

______ TOTAL = PRESENTATION POINTS (50 points maximum)

**TOTAL = DESIGN POINTS (150 points maximum)**

**COMMENTS:**

_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________
_____________________________________________________________________________________

© 2009 SAE International. All Rights Reserved. Printed in USA. 2010 Formula SAE Rules
ARTICLE 1: DYNAMIC EVENTS AND MAXIMUM SCORES

The maximum scores in the dynamic events are:

- Acceleration: 75 points
- Skid Pad: 50 points
- Autocross: 150 points
- Fuel Economy: 100 points
- Endurance: 300 points
- Total: 675 points

D1.1 Vehicle Integrity and Disqualification

D1.1.1 During the Dynamic Events, the mechanical integrity of the vehicle must be maintained.

D1.1.2 Any vehicle condition that could compromise vehicle integrity, or could compromise the track surface or could pose a potential hazard to participants, e.g. damaged suspension, brakes or steering components, fluid leaks, dragging bodywork, or lost or loose body panels, will be a valid reason for exclusion by the official until the problem is rectified.

Note: If this happens during the Endurance Event, it means disqualification from the heat.

ARTICLE 2: WEATHER CONDITIONS

The organizer reserves the right to alter the conduct and scoring of the competition based on weather conditions.

ARTICLE 3: RUNNING IN RAIN

D3.1 Operating Conditions

The following operating conditions will be recognized at Formula SAE:

D3.1.1 Dry – Overall the track surface is dry.

D3.1.2 Damp – Significant sections of the track surface are damp.

D3.1.3 Wet – The entire track surface is wet and there may be puddles of water.

D3.1.4 Weather Delay/Cancellation – Any situation in which all, or part, of an event is delayed, rescheduled or canceled in response to weather conditions.

D3.2 Decision on Operating Conditions

The operating condition in effect at any time during the competition will be decided by the competition officials.

D3.3 Notification

If the competition officials declare the track(s) to be "Damp" or "Wet", ...
i. This decision will be announced over the public address system, and
ii. A sign with either "Damp" or "Wet" will be prominently displayed at both the
starting line(s) or the start-finish line of the event(s), and the entry gate to the "hot" area.

D3.4 Tire Requirements
The operating conditions will determine the type of tires a car may run as follows:

D3.4.1 Dry – Cars must run their Dry Tires, except as covered in Rule D.3.8.2.

D3.4.2 Damp – Cars may run either their Dry Tires or Rain Tires, at each team’s option.

D3.4.3 Wet – Cars must run their Rain Tires.

D3.5 Event Rules
All event rules remain in effect.

D3.6 Penalties
All penalties remain in effect.

D3.7 Scoring
No adjustments will be made to teams' times for running in "Damp" or "Wet" conditions. The
minimum performance levels to score points may be adjusted if deemed appropriate by the officials.

D3.8 Tire Changing
D3.8.1 During the Acceleration, Skid-Pad or Autocross Events:
Within the provisions of Rule D.3.4 above, teams may change from Dry Tires to Rain Tires
or vice versa at any time during those events at their own discretion.

D3.8.2 During the Endurance Event:
Teams may change from Dry to Rain Tires or vice versa at any time while their car is in the staging
area inside the "hot" area.

All tire changes after a car has received the "green flag" to start the Endurance Event shall take place
in the Driver Change Area.

(a) If the track was "Dry" and is declared "Damp":
   • Teams may start on either Dry or Rain Tires at their option.
   • Teams that are on the track when it is declared "Damp", may elect, at their option,
     to pit in the Driver Change Area and change to Rain Tires under the terms spelled
     out below in "Tire Changes in the Driver Change Area".

(b) If the track is declared "Wet":
   • A Red Flag will be shown at the Start/Finish Line and all cars will enter the Driver
     Change Area.
   • Those cars that are already fitted with "Rain" tires will be allowed re-start without
     delay subject to the discretion of the Event Captain/Chief Marshall.
   • Those cars without "Rain" tires will be required to fit them under the terms spelled
     out below in "Tire Changes in the Driver Change Area". They will then be allowed
     to re-start at the discretion of the Event Captain/Chief Marshall.

(c) If the track is declared "Dry" after being "Damp" or "Wet":
   • The teams will NOT be required to change back to “Dry” tires.
(d) Tire Changes at Team's Option:
   • Within the provisions of Rule D.3.4 above and Rule D.3.8.2(b) above, a team will be permitted to change tires at their option.
   • If a team elects to change from “Dry” to “Rain” tires, the time to make the change will NOT be included in the team’s total time.
   • If a team elects to change from “Rain” tires back to “Dry” tires, the time taken to make the change WILL be included in the team’s total time for the event, i.e. it will not be subtracted from the total elapsed time. However, a change from “Rain” tires back to “Dry” tires will not be permitted during the driver change.
   • To make such a change, the following procedure must be followed:
     o Team makes the decision,
     o Team has tires and equipment ready near Driver Change Area,
     o The team informs the Event Captain/Chief Marshall they wish their car to be brought in for a tire change,
     o Officials inform the driver by means of a sign or flag at the checker flag station,
     o Driver exits the track and enters the Driver Change Area in the normal manner.

(e) Tire Changes in the Driver Change Area:
   • Per Rule D.8.11.2, no more than three people for each team may be present in the Driver Change Area during any tire change, e.g. a driver and two crew or two drivers and one crew member.
   • No other work may be performed on the cars during a tire change.
   • Teams changing from "Dry" to "Rain" tires will be allowed a maximum of ten (10) minutes to make the change.
   • If a team elects to change from "Dry" to "Rain" tires during their scheduled driver change, they may do so, and the total allowed time in the Driver Change Area will be thirteen (13) minutes.
   • The time spent in the driver change area of less than 10 minutes without driver change, or 13 minutes with driver change, will not be counted in the team's total time for the event. Any time in excess of these times will be counted in the team's total time for the event.

ARTICLE 4: DRIVER LIMITATIONS

D4.1 Three Event Limit
An individual team member may not drive in more than three (3) events.

D4.1.1 The Fuel Economy Event is considered a separate event although it is conducted simultaneously with the Endurance Event.

D4.2 Single Heat Limit
An individual may not drive in both heats of any event. It is the team’s option to participate in any event.

D4.2.1 The team may forfeit their second heat in any performance event.
Note: At competitions where Endurance and Fuel Economy is run with one (1) heat a minimum of four (4) drivers are required to participate in all heats of the dynamic events. At competitions where Endurance and Fuel Economy is run with two (2) heats a minimum of five (5) drivers are required to participate in all heats of the dynamic events.

ARTICLE 5: ACCELERATION EVENT

D5.1 Acceleration Objective
The acceleration event evaluates the car’s acceleration in a straight line on flat pavement.

D5.2 Acceleration Procedure
The cars will accelerate from a standing start over a distance of 75 m (82 yards) on a flat surface.

D5.2.1 The foremost part of the car will be staged at 0.30 m (11.8 inches) behind the starting line.

D5.2.2 A green flag will be used to indicate the approval to begin, however, time starts only after the vehicle crosses the start line.

D5.2.3 A driver has the option to take a second run immediately after the first.

D5.3 Acceleration Heats
D5.3.1 There will be two (2) heats. Each heat must have a different driver and each driver can have two (2) runs.

D5.3.2 Starting order will be based upon time of arrival to the staging area.

D5.3.3 Heat one (1) and heat two (2) will not be run sequentially, but simultaneously. Heat 1 drivers will have starting priority over heat 2 drivers.

D5.4 Tire Traction – Limitations
Special agents that increase traction may not be added to the tires or track surface and “burnouts” are not allowed.

D5.5 Acceleration Scoring
The acceleration score is based upon the corrected elapsed time. Elapsed time will be measured from the time the car crosses the starting line until it crosses the finish line.

D5.6 Acceleration Penalties
D5.6.1 Cones Down Or Out (DOO)
A two (2) second penalty will be added for each DOO (including entry and exit gate cones) that occurred on that particular run to give the corrected elapsed time.

D5.6.2 Off Course
An Off Course (OC) will result in a DNF for that run.

D5.7 Did Not Attempt
Cars that have not run by the end of the event (determined by the organizer) will receive a Did Not Finish (DNF).
D5.8 Acceleration Scoring Formula

The score for the acceleration event is spread between zero (0) and seventy-five (75) based upon the elapsed time.

D5.8.2 The following equation is used to determine the scores for the event:

\[
\text{ACCELERATION SCORE} = 71.5 \times \left( \frac{5.8}{\text{Tyour}} - 1 \right) - \left( \frac{5.8}{\text{Tmin}} - 1 \right) + 3.5
\]

Where:

- \( \text{Tyour} \) is the best corrected elapsed time for the team including penalties.
- \( \text{Tmin} \) is the elapsed time of the fastest car.

D5.8.3 In the above equation, the first term on the right hand side is “performance” points”, while the second term represents “completion points,” or the minimum score for having successfully completed the event. DNF = zero (0) points

D5.8.4 The maximum acceptable acceleration time is 5.8 seconds corresponding to an average speed of 46.55 km/hr.

D5.8.5 Negative “performance” points will not be given. However, 3.5 points will be given for a car that completes a run, even if \( \text{Tyour} \) exceeds 5.8 seconds.

ARTICLE 6: SKID-PAD EVENT

D6.1 Skid-Pad Objective

The objective of the skid-pad event is to measure the car’s cornering ability on a flat surface while making a constant-radius turn.

D6.2 Skid-Pad Heats

D6.2.1 Each car may compete in two heats. Each heat must have a different driver, and each driver may have two (2) runs.

D6.2.2 Two separate skid-pad locations may exist. If there are two (2) skid-pads, one driver must make both his runs on one skid-pad (Skid-Pad 1) and the other driver must make both his runs on the other skid-pad (Skid-Pad 2).

D6.2.3 If there is only one skid-pad location then both Heat one (1) and Heat two (2) will be run on the same skid-pad.

D6.3 Skid-Pad Heat Priority

There will be no distinction between Heat one (1) and Heat two (2) and there will be no particular starting order. Heat one (1) drivers will have a starting priority over Heat two (2) drivers. Cars which have not run by the event closing (determined by the organizer) will receive a DNF for the event.

D6.4 Skid-Pad Layout

There will be two (2) pairs of concentric circles in a figure of eight pattern. The centers of these circles will be 18.25 m (59.88 feet) apart. The inner circles will be 15.25 m (50.03 feet) in diameter, and the outer circles will be 21.25 m (69.72 feet) in diameter. The driving path will be the 3.0 m (9.84 feet)
feet) path between the inner and outer circles. The cars will enter and exit through gates on a 3.0 m wide path that is tangential to the circles where they meet.

The line between the centers of the circles defines the start/stop line. A lap is defined as traveling around one (1) of the circles from the start/stop line and returning to the start/stop line.

**FSAE SKIDPAD LAYOUT**

![FSAE Skid Pad Layout Diagram]

**D6.5 Skid-Pad Layout – Marking**

D6.5.1 Sixteen (16) pylons will be placed around the inside of each inner circle thirteen (13) pylons positioned around the outside of each outer circle in the pattern shown in the FSAE skid pad layout diagram.

D6.5.2 Each circle will be marked with a chalk line, inside the inner circle and outside the outer circle, i.e. not on the driving path.

D6.5.3 Additional pylons will establish the required entry and exit gates. Also, a cone will be placed in the middle of the exit gate to prevent unintended exits until the finish lap.

Note: The diagram in section D6.4 shows the circles for cone placement, not for course marking. Chalk lines are marked on the opposite side of the cones, i.e. not in the driving path.
D6.6 Skid-Pad Procedure
The cars will enter perpendicular to the figure eight and will take one full lap on the right circle to establish the turn. The next lap will be on the right circle and will be timed. Immediately following the second lap, the car will enter the left circle for the third lap. The fourth lap will be on the left circle and will be timed. Immediately upon finishing the fourth lap, the car will exit the track. The car will exit at the intersection moving in the same direction as entered. A driver has the option to take a second run immediately after the first.

D6.7 Skid-Pad Penalties
The elapsed time for the right and left circle will be averaged together after the following penalties have been assessed.

D6.7.1 Cones Down Or Out (DOO)
A penalty of 0.25 seconds will be added to the time for every cone that is knocked “down or out” (including gate cones).

D6.7.2 Off Course
Cars that spin-out can continue as long as they have not gone off course. Cars going off course will be classified as DNF.

D6.7.3 Incorrect Laps
Cars that do not follow D.6.6 above, i.e. run an incorrect number of laps or run the laps in the wrong sequence will be classified as DNF.

D6.8 Skid-Pad Scoring
D6.8.1 The skid-pad score is computed based upon the lateral acceleration capability. Lateral acceleration (typically referred to as G’s) is computed from $2.012 \text{ diameter/t}^2$. A diameter of 17.10 m will be assumed in computing lateral G’s.

D6.8.2 If there are two separate skid-pad locations, then the score will be based on the best run from either skid-pad.

D6.8.3 The following equation is used to determine the scores for the skid-pad event:

$$\text{SKID PAD SCORE} = 47.5 \times \frac{(6.184/\text{Your})^2 - 1}{(6.184/\text{Tmin})^2 - 1} + 2.5$$

Where:

- $\text{Your}$ is the average of the left and the right timed laps on your best run including penalties.
- $\text{Tmin}$ is the elapsed time of the fastest car

D6.8.4 The first term on the right-hand side of the equation represent “performance points,” while the second term represents “completion points,” or the minimum score for having successfully completed the event.

D6.8.5 The minimum acceptable lateral acceleration to earn “performance” points is 0.90 G’s corresponding to 6.184 seconds per circle. Negative “performance” points will not be given. However, 2.5 points will be given if a car that completes a run that exceeds 6.184 seconds per circle AND is not classified as a DNF.
ARTICLE 7: AUTOCROSS EVENT

D7.1 Autocross Objective
The objective of the autocross event is to evaluate the car's maneuverability and handling qualities on a tight course without the hindrance of competing cars. The autocross course will combine the performance features of acceleration, braking, and cornering into one event.

D7.2 Autocross Course Specifications & Speeds
D7.2.1 The following standard specifications will suggest the maximum speeds that will be encountered on the course. Average speeds should be 40 km/hr (25 mph) to 48 km/hr (30 mph).

**Straight:** No longer than 60 m (200 feet) with hairpins at both ends (or) no longer than 45 m (150 feet) with wide turns on the ends.

**Constant Turns:** 23 m (75 feet) to 45 m (148 feet) diameter.

**Hairpin Turns:** Minimum of 9 m (29.5 feet) outside diameter (of the turn).

**Slaloms:** Cones in a straight line with 7.62 m (25 feet) to 12.19 m (40 feet) spacing.

**Miscellaneous:** Chicanes, multiple turns, decreasing radius turns, etc. The minimum track width will be 3.5 m (11.5 feet).

D7.2.2 The length of each run will be approximately 0.805 km (1/2 mile) and the driver will complete a specified number of runs.

D7.2.3 The organizers reserve the right to run the Autocross Event on courses of different length.

D7.2.4 The organizers reserve the right to deviate from the standard specifications when they determine it is appropriate given the characteristics of a particular competition site.

D7.3 Autocross Procedure
D7.3.1 There will be two (2) Autocross-style heats, with each heat having a different driver. Two (2) timed laps will be run (weather and time permitting) by each driver and the best lap time will stand as the time for that heat.

D7.3.2 The car will be staged such that the front wheels are 6 m (19.7 feet) behind the starting line. The timer starts only after the car crosses the start line.

D7.3.3 There will be no particular order of the cars to run each heat but a driver has the option to take a second run immediately after the first.

D7.3.4 The organizer will determine the allowable windows for each heat and retains the right to adjust for weather or technical delays. Cars that have not run by the end of the heat will be disqualified for that heat.

D7.4 Autocross Penalties
The cars are judged on elapsed time plus penalties. The following penalties will be added to the elapsed time:

D7.4.1 Cone Down or Out (DOO)
Two (2) seconds per cone, including any after the finish line.
D7.4.2 Off Course
   a. Driver must re-enter the track at or prior to the missed gate or a twenty (20) second penalty will be assessed.
   b. Penalties will not be assessed for accident avoidance or other reasons deemed sufficient by the track officials.
   c. If a paved road edged by grass or dirt is being used as the track, e.g. a go kart track, four (4) wheels off the paved surface will count as an "off course". Two (2) wheels off will not incur an immediate penalty; however, consistent driving of this type may be penalized at the discretion of the event officials.

D7.4.3 Missed Slalom
Missing one or more gates of a given slalom will be counted as one "off-course" per occurrence. Each occurrence will incur a twenty (20) second penalty.

D7.5 Stalled & Disabled Vehicles
D7.5.1 If a car stalls and cannot restart without external assistance, the car will be deemed disabled.
D7.5.2 Disabled cars are scored DNF for that attempt.
D7.5.3 Disabled cars will be cleared from the track by the track workers. At the direction of the track officials team members may be instructed to retrieve the vehicle. Vehicle recovery may only be done under the control of the track officials.

D7.6 Corrected Elapsed Time
D7.6.1 The elapsed time plus any penalties from that specific run will be used as the corrected elapsed time.
D7.6.2 Cars that are unable to complete the course with an average speed of 80% of the fastest car will not be awarded “performance” points. This means that any autocross time in excess of 125% of the fastest time will receive no “performance” points.

D7.7 Best Run Scored
The time required to complete each run will be recorded and the team’s best corrected elapsed time will be used to determine the score.

D7.8 Autocross Scoring Formula
D7.8.1 The following equation is used to determine the autocross score:

\[
\text{AUTOCROSS SCORE} = 142.5 \times \left( \frac{T_{\text{max}}/T_{\text{your}}}{T_{\text{max}}/T_{\text{min}}} - 1 \right) - 7.5
\]

Where:
Tmin is the lowest corrected elapsed time recorded for any competitor in either heat
Tmax is 125% of Tmin
Tyour is the lowest corrected elapsed time in either heat for the team being scored.
D7.8.2 In the equation above, the first term on the right hand side represents “performance” points, while the second term, or “completion” points represents the minimum score for having successfully completed the event.
D7.8.3 Negative “performance” points will not be given. However, 7.5 points will be given for a car that completes a run, even if your exceeds 125% of the fastest time (Tmin)

ARTICLE 8: ENDURANCE AND FUEL ECONOMY

D8.1 At Formula SAE competitions in North America the Endurance & Fuel Economy event will consist of a single heat. For competitions outside North America please check the event website.

D8.2 Driver Eligibility – The Endurance and Fuel Economy are separate events even though they are run simultaneously. Therefore anyone driving in a heat of Endurance and Fuel Economy uses two (2) driving eligibilities. (See Article D.4 “Driver Limitations”)

D8.3 Right to Change Procedure
This Article D.8, contains the general guidelines for conducting the Endurance and Fuel Economy event, however, the organizers reserve the right to establish procedures specific to the conduct of the event at the site. All such procedures will be made known to the teams through email or the specific FSAE competition news page website.

D8.4 Endurance Objective—300 points
The Endurance Event is designed to evaluate the overall performance of the car and to test the car’s durability and reliability.

D8.5 Fuel Economy—100 points
The car’s fuel economy will be measured in conjunction with the Endurance Event. The fuel economy under competition conditions is important in most vehicle competitions and also shows how well the car has been tuned for the competition. This is a compromise event because the fuel economy score and endurance score will be calculated from the same heat. No refueling will be allowed during an endurance heat.

D8.6 Endurance Course Specifications & Speeds
D8.6.1 Course speeds can be estimated by the following standard course specifications. Average speed should be 48 km/hr (29.8 mph) to 57 km/hr (35.4 mph) with top speeds of approximately 105 km/hr (65.2 mph).

D8.6.2 The standard specifications for the FSAE Endurance Course are:

- **Straights**: No longer than 77.0 m (252.6 feet) with hairpins at both ends (or) no longer than 61.0 m (200.1 feet) with wide turns on the ends. There will be passing zones at several locations.

- **Constant Turns**: 30.0 m (98.4 feet) to 54.0 m (177.2 feet) diameter.

- **Hairpin Turns**: Minimum of 9.0 m (29.5 feet) outside diameter (of the turn).

- **Slaloms**: Cones in a straight line with 9.0 m (29.5 feet) to 15.0 m (49.2 feet) spacing.

- **Miscellaneous**: Chicanes, multiple turns, decreasing radius turns, etc. The standard minimum track width is 4.5 m (14.76 feet).
D8.6.3 The organizers reserve the right to deviate from the standard specifications when they determine it is appropriate given the characteristics of a particular competition site.

**D8.7 Endurance General Procedure**

D8.7.1 The event will be run as a single heat approximately 22 km (13.66 miles) long.

D8.7.2 Teams are not allowed to work on their vehicles during the heat.

D8.7.3 A driver change must be made during a three (3) minute period at the midpoint of the heat.

D8.7.4 Wheel-to-wheel racing is prohibited.

D8.7.5 Passing another vehicle may only be done in an established passing zone or under control of a course marshal.

D8.7.6 Elapsed time will begin when Driver A enters the course and crosses the timing line.

**D8.8 Endurance Run Order**

D8.8.1 The run order for endurance will be based primarily on the finish order for the autocross event with the fastest team first followed by the second fastest etc. For teams without an autocross score, the finish order for the acceleration event may be substituted. For teams without a score in either autocross or acceleration, the finish order for skid pad may be substituted. Teams without a score in the event used to determine the run order may run at the end of the heat.

D8.8.2 Based on the results of all dynamic events, and considering the operating conditions under which they were run, the endurance event captain may, at his sole discretion, move teams to different positions within the starting order.

D8.8.3 Teams are required to keep track of the run order and have their cars fueled, in line and prepared to start when their turn to run arrives.

D8.8.4 Teams that are not ready-to-run when their turn arrives will be penalized two (2) minutes and permitted to run at the end of the heat (time permitting) or at the discretion of the event captain.

**D8.9 Endurance Fuel Fill**

Before entering the event each vehicle’s fuel tank must be filled to the fuel level line (see Rule B.9.6.6, “Fuel Level Line”) at the fueling station. During fueling, once filled to the scribe line, no shaking or tilting of the tank or fuel system (incl. entire vehicle) is allowed.

**D8.10 Endurance Vehicle Starting/Restarting**

D8.10.1 The vehicle must be capable of starting/restarting without external assistance at all times once the vehicle has begun the heat.

D8.10.2 If a vehicle stalls out on the track, it will be allowed one (1) lap by the car that is following it (approximately one (1) minute) to restart.

D8.10.3 If a vehicle has a restart problem at the end of Driver Change, it will be allowed a further two (2) minutes to restart the engine.

D8.10.4 If restarts are not accomplished within the above times, the car will be deemed disabled and scored DNF for the heat.
D8.11 Endurance Driver Change Procedure
D8.11.1 Three (3) minutes are allowed for the team to change drivers.

D8.11.2 Only three (3) team members, including the driver or drivers, will be allowed in the driver change area, and only the tools necessary adjust the car to accommodate the second driver and/or change tires will be carried into this area (no tool chests etc.). Extra people entering the driver change area will result in a twenty point (20 pt) penalty to the final endurance score for each extra person entering the area.

D.8.11.3 Other than changes to accommodate the second driver or covered by D.3.8.2 Tire Changing, the team is not permitted to perform any work on the car at Driver Change.

D8.11.4 Driver A will drive for 11 km (6.83 miles), and then be signaled into the driver change area.

D8.11.5 Driver A will exit the vehicle and any necessary adjustments will be made to the vehicle to fit Driver B (seat cushions, head restraint, pedal position, etc.). Driver B will then be secured in the vehicle.

D8.11.6 Driver B will drive for 11 km (6.83 miles) and elapsed time will stop when the car completes the total 22 km (13.66 miles) distance.

D8.11.7 Driver B will proceed directly to the fueling station. The tank will be filled to refill mark and the amount will be recorded.

D8.11.8 The driver change area will be placed such that the timing system will see the driver change as an extra long lap. Unless this driver change takes longer than three minutes, this extra long lap will not count. If the driver change takes longer than three minutes, the extra time will be counted into the final time.

D8.12 Entering the Track
D8.12.1 Cars will be allowed to enter the track based upon the level of traffic on the course.

D8.12.2 The number of vehicles simultaneously on the course depends on the track length and design as well as the operating conditions. In dry conditions, there are typically 5 to 7 vehicles allowed per kilometer of track. This includes cars in the driver change area.

D8.12.3 Because repairs are not allowed during the heat, and there will be no refueling during the heat, there will not be a restart queue of any kind.

D8.13 Breakdowns & Stalls
D8.13.1 If a vehicle breaks down it will be removed from the course and will not be allowed to re-enter the course.

D8.13.2 If a vehicle stalls, or ingests a cone, etc., it will be allowed to restart (See D.8.10 “Endurance Vehicle Starting/Restarting”) and re-enter the course where it went off, but no work may be performed on the vehicle.

D8.13.3 If a car stalls and cannot be restarted without external assistance, the track workers will push the car clear of the track. At the discretion of event officials, two (2) team members may retrieve the car under direction of the track workers.
D8.14 **Endurance Minimum Speed Requirement**

D8.14.1 If a car is unable to maintain lap times within 145% of the fastest lap time for the course, then it must exit immediately.

D8.14.2 Disqualification for failure to maintain the minimum speed will be made at the discretion of the Chief Marshall/Director of Operations.

D8.15 **Post Event Refueling**

Vehicles must power down after leaving the course and be pushed to the fueling area.

Fuel pumps will be turned on and fuel valves will be opened to insure complete refueling.

D8.16 **Endurance Lap Timing**

Each lap of the endurance event will be individually timed either by electronic means, or by hand. The time for an individual heat will be determined by subtracting the extra long lap for the driver change, and the time taken for any stops under a mechanical black flag, from the total time and adding any penalty points.

D8.17 **Endurance Penalties**

D8.17.1 Penalties will not be assessed for accident avoidance or other reason deemed sufficient by the track official.

D8.17.2 The penalties in effect during the Endurance Event are listed below.

D8.17.3 Cones

Cone down or out (DOO) - two (2) seconds per cone. This includes cones before the start line and after the finish line.

D8.17.4 Off Course (OC)

a. For an OC, the driver must re-enter the track at or prior to the missed gate or a twenty (20) second penalty will be assessed.

b. If a paved road edged by grass or dirt is being used as the track, e.g. a go kart track, four (4) wheels off the paved surface shall count as an "off course".

c. Two (2) wheels off will not incur an immediate penalty. However, consistent driving of this type may be penalized at the discretion of the event officials.

D8.17.5 Missed Slalom

Missing one or more gates of a given slalom will incur a twenty (20) second penalty.

D8.17.6 Penalties for Moving Violations

The following are penalties and assessed times or disqualifications for moving violations:

a. Failure to obey a flag: 1 minute

b. Over Driving (After a closed black flag): 1 Minute

c. Vehicle to Vehicle contact: 2 Minutes up to disqualification depending on the nature of the incident.

D8.17.7 Out of Order

Running out of order – two (2) minute penalty.
D8.17.8 Mechanical Problem
No time penalty. The time taken for mechanical inspection under a “mechanical black flag” is considered officials’ time and is not included in the teams’ total time. However, if the inspection reveals a mechanical integrity problem the vehicle may be disqualified under Rule D.1.1 “Vehicle Integrity and Disqualification”.

D8.17.9 Reckless or Aggressive Driving
Any reckless or aggressive driving behavior (such as forcing another car off the track, refusal to allow passing, or close driving that would cause the likelihood of car contact) will result in a black flag for that driver. When a driver receives a black flag signal, he must proceed to the penalty box to listen to a reprimand for his driving behavior. The amount of time spent in the penalty box will vary from one (1) to four (4) minutes depending upon the severity of the offense.

If it is impossible to impose a penalty by a stop under a black flag, e.g. not enough laps left, the event officials may add an appropriate time penalty to the team’s elapsed time.

D8.17.10 Vehicle Control Issues
The Chief Marshall/Director of Operations may disqualify a vehicle if, for any reason including driver inexperience and mechanical problems, it is too slow or being driven in a manner that, in the sole opinion of the event officials demonstrates an inability to properly control the car. Disqualification for a vehicle control issue is scored as DNF.

D8.18 Endurance Scoring
D8.18.1 The score for the Endurance Event is the sum of the Endurance Time Score and the Endurance Finish Score.

D8.18.2 The Endurance Time Score is based on the team's time for the event, including penalties, compared to the fastest team.

D8.18.3 A car will also receive an Endurance Finish Score of fifty (50) points if the team's time for the event, including penalties, is less than or equal to the maximum allotted time.

D8.19 Endurance Scoring Formula
D8.19.1 The times for the endurance event will be based upon the sum of the times of each driver in the heat plus penalties.

D8.19.2 The following equation is used to determine the time scores for the event:
If $T_{your}$ is $< \text{ or } = \text{ to } T_{max}$:

$$ENDURANCE\ \SCORE = 250 \times \frac{(T_{max}/T_{your}) - 1}{(T_{max}/T_{min}) - 1} + 50$$

If $T_{your} > T_{max}$: ENDURANCE SCORE = 0 (ZERO)

$T_{min}$ will be the lowest corrected time of the fastest team of the event.

$T_{your}$ will be the combined corrected times of both of your team’s drivers in the heat.

$T_{max}$ will be 1.45 times $T_{min}$.
D8.19.3 If, in the opinion of the officials, course conditions change significantly during the running of the event then they may, at their sole discretion, set Tmax to a higher value.

D8.20 Fuel Economy
The Fuel Economy score is based on the average liters per kilometer fuel economy obtained during the endurance heat.

Teams are advised that the fuel economy score is based only on the distance cars run on the course during the endurance event. Although the starting line, exit line and the driver change zone increase the actual distance a car must drive during the event, those distances are not factored into the fuel economy calculations. Additionally fuel consumption adjustments will not be made for engine running in the entry/exit lines, during driver change, in the penalty box or for any on-course incidents.

D8.21 E85 Correction Factor
The volume of E85 fuel will be divided by a 1.40 correction factor to determine the gasoline equivalent volume. This correction factor is equal to the ratio of energy (lower heating value) per unit volume of gasoline to E85.

D8.22 Fuel Economy Scoring Formula
D8.22.1 If Vyour is less than Vmax then the following equation will be used to determine the fuel economy score:

\[
FUEL \ ECONOMY \ SCORE = 100 \times \frac{(V_{\text{max}} - V_{\text{your}})}{(V_{\text{max}} - V_{\text{min}})}
\]

If Vyour is greater than Vmax then the following equation will be used to determine a negative fuel economy score:

\[
FUEL \ ECONOMY \ SCORE = -100 \times \left(\frac{V_{\text{your}}/V_{\text{max}}}{0.33} - 1\right)^{1.5}
\]

Where:
- \(V_{\text{max}}\) is the volume of fuel that produces a fuel consumption of 26 liters/100 km. Note - For an Endurance Event distance of exactly 22 km, \(V_{\text{max}}\) is 5.72 liters (1.51 US gallons).”
- \(V_{\text{min}}\) is the smallest volume of fuel used by any competitor
- \(V_{\text{your}}\) is the volume of fuel used by the team being scored

D8.22.2 Vehicles using a fuel volume which exceeds Vmax by 33% will score negative one hundred (-100) points.

D8.22.3 Vehicles whose corrected time exceeds 1.45 times the corrected time of the fastest team, will receive zero (0) points for fuel economy.

D8.22.4 For shortened courses, Vmin will be the low value per heat.

D8.22.5 Fuel economy scores can range from negative one hundred (-100) to positive one hundred (100) points.

D8.22.6 The minimum combined score for the endurance and fuel economy event will be zero (0) points.
D8.23 Endurance and Fuel Economy Scoring with Two Heats
If the Endurance and Fuel Economy is run with two (2) heats, the following procedure will apply:
   a. **Tmin** will be the lowest corrected time of the fastest team of the event in either heat.
   b. **Vmin** will be the smallest volume of fuel used by any team in either heat; provided that
      team’s Corrected Time from that heat does not exceed **Tmax**.
      Note: **Tmin** and **Vmin** do not have to be from the same heat.
   c. The score for a team will be taken from the heat that gives the higher total Endurance & Fuel
      Economy Score for that team, i.e. **Your** and **Vyour** will be from the same heat.

D8.24 Post Event Engine Check
The organizer reserves the right to impound any vehicle immediately after the event to check engine
displacement (method to be determined by the organizer) and restrictor size.

D8.25 Endurance Event – Driving
D8.25.1 During Endurance when multiple cars are running on the course it is paramount that the drivers
strictly follow all of the rules and driving requirements.

D8.25.2 Aggressive driving, failing to obey signals, not yielding for passing, etc will result in a black flag and
a discussion in the penalty box with course officials. The amount of time spent in the penalty box is at
the discretion of the officials and is included in the run time. Penalty box time serves as a reprimand
as well as informing the driver of what he/she did wrong. Drivers should be aware that contact
between open wheel vehicles is especially dangerous because tires touching can throw one car into the
air.

Endurance is a timed event in which drivers compete only against the clock not against other cars.
Aggressive driving is unnecessary.

D8.26 Endurance Event – Passing
D8.26.1 Passing during Endurance may only be done in the designated passing zones and under the control of
the track officials.

D8.26.2 Passing zones have two parallel lanes – a slow lane for the cars that are being passed and a fast lane
for the cars that are making a pass. On approaching a passing zone a slower leading car will be blue
flagged and must shift into the slow lane and decelerate. The following faster car will continue in the
fast lane and make the pass. The car that had been passed may reenter traffic only under the control of
the passing zone exit flagman.

D8.26.3 Passing, i.e. slow, lanes may be either to the left or right of the fast lane depending on the design of
the specific course.

D8.26.4 These passing rules do not apply to cars that are passing disabled cars on the course or cars that have
spun out and are not moving. When passing a disabled or off-track car it is critical to slow down,
drive cautiously and be aware of all the vehicles and track workers in the area.

D8.26.5 Under normal driving conditions when not being passed all cars use the fast lane.

D8.27 Endurance Event – Driver’s Course Walk
The endurance course will be available for walk by drivers prior to the event. All endurance drivers
are required to walk the course before the event starts.
ARTICLE 9: FLAGS

D9.1 Flag Effect
Flag signals are commands that must be obeyed immediately and without question.

D9.2 Flag Types
There are two kinds of flags for the competition: Command flags and Informational flags.

D9.2.1 Command flags are just that, flags that send a message to the competitor that the competitor must obey without question.

D9.2.2 Informational flags, on the other hand, require no action from the driver, but should be used as added information to help him or her to maximize performance.

D9.3 Command Flags
The following is a brief description of the flags used at the competitions in North America and what each flag means.

Note: Not all of these flags are used at all competitions and some alternate designs are occasionally displayed. Any variations from this list will be explained at the drivers meetings.

D9.3.1 BLACK FLAG - Pull into the penalty box for discussion with the Chief Marshall/Director of Operations or other official concerning an incident. A time penalty may be assessed for such incident.

D9.3.2 BLACK FLAG - With Orange Dot - Pull into the penalty box for a mechanical inspection of your car, something has been observed that needs closer inspection.

D9.3.3 BLUE FLAG - Pull into the designated passing zone to be passed by a faster competitor. Obey the corner workers hand signals at the end of the passing zone to merge into competition.

D9.3.4 CHECKER FLAG - Your session has been completed. Exit the course at the first opportunity.

D9.3.5 GREEN FLAG - Your session has started, enter the course under direction of the starter. (NOTE: If you stall the vehicle, please restart and await another green flag as the opening in traffic may have closed.)

D9.3.6 RED FLAG - Come to an immediate safe controlled stop on the course. Pull to the side of the course as much as possible to keep the course open. Follow corner worker directions.

D9.3.7 YELLOW FLAG (Stationary) - Danger, SLOW DOWN, be prepared to take evasive action, something has happened beyond the flag station. NO PASSING unless directed by the corner workers.

D9.3.8 YELLOW FLAG (Waved) - Great Danger, SLOW DOWN, evasive action is most likely required, BE PREPARED TO STOP, something has happened beyond the flag station, NO PASSING unless directed by the corner workers.

D9.4 Informational Flags
D9.4.1 RED AND YELLOW STRIPED FLAG - Something is on the racing surface that should not be there. Be prepared for evasive maneuvers to avoid the situation. (Corner workers may be able to point out what and where it is located, but do not expect it.)
D9.4.2 WHITE FLAG - There is a slow moving vehicle on the course that is much slower than you are. Be prepared to approach it at a cautious rate.

ARTICLE 10: RULES OF CONDUCT

D10.1 Competition Objective – A Reminder
The Formula SAE® event is a design engineering competition that requires performance demonstration of vehicles and is NOT a race. Engineering ethics will apply. It is recognized that hundreds of hours of labor have gone into fielding an entry into Formula SAE. It is also recognized that this event is an “engineering educational experience” but that it often times becomes confused with a high stakes race. In the heat of competition, emotions peak and disputes arise. Our officials are trained volunteers and maximum human effort will be made to settle problems in an equitable, professional manner.

D10.2 Unsportsmanlike Conduct
In the event of unsportsmanlike conduct, the team will receive a warning from an official. A second violation will result in expulsion of the team from the competition.

D10.3 Official Instructions
Failure of a team member to follow an instruction or command directed specifically to that team or team member will result in a twenty five (25) point penalty.

Note: This penalty can be individually applied to all members of a team.

D10.4 Arguments with Officials
Argument with, or disobedience to, any official may result in the team being eliminated from the competition. All members of the team may be immediately escorted from the grounds.

D10.5 Alcohol and Illegal Material
D10.5.1 Alcohol, illegal drugs, weapons or other illegal material are prohibited on the event site during the competition. This rule will be in effect during the entire competition.

D10.5.2 Any violation of this rule by a team member will cause the expulsion of the entire team. This applies to both team members and faculty advisors.

D10.5.3 Any use of drugs, or the use of alcohol by an underage individual, will be reported to the local authorities.

D10.6 Parties
Disruptive parties either on or off-site should be prevented by the Faculty Advisor.

D10.7 Trash Clean-up
D10.7.1 Cleanup of trash and debris is the responsibility of the teams. The team’s work area should be kept uncluttered. At the end of the day, each team must clean all debris from their area and help with maintaining a clean paddock.

D10.7.2 Teams are required to remove all of their material and trash when leaving the site at the end of the competition. Teams that abandon furniture, or that leave a paddock that requires special cleaning, will be billed for removal and/or cleanup costs.
ARTICLE 11: GENERAL RULES

D11.1 Dynamometer Usage
If a dynamometer is available, it may be used by any competing team. Vehicles to be dynamometer tested must have passed all parts of technical inspection.

Fuel, ignition and drivetrain tuning will be permitted while testing on the dynamometer.

D11.2 Problem Resolution
Any problems that arise during the competition will be resolved through the Operations Center and the decision will be final.

D11.3 Forfeit for Non-Appearance
D11.3.1 It is the responsibility of teams to be in the right place at the right time.

D11.3.2 If a team is not present and ready to compete at the scheduled time they forfeit their attempt at that event.

D11.3.3 There are no make-ups for missed appearances.

D11.4 Drivers Meetings – Attendance Required
All drivers for an event are required to attend the pre-event drivers meeting(s). The driver for an event will be disqualified if he/she does not attend the driver meeting for the event.

D11.5 Personal Vehicles
Personal cars and trailers must be parked in designated areas only. Only FSAE competition vehicles will be allowed in the track areas.

D11.6 Motorcycles, Bicycles, Rollerblades, etc.—Prohibited
The use of motorcycles, quads, bicycles, scooters, skateboards, rollerblades or similar person-carrying devices by team members and spectators in any part of the competition area, including the paddocks, is prohibited.

D11.7 Self-propelled Pit Carts, Tool Boxes, etc. - Prohibited
The use of self-propelled pit carts, tool boxes, tire carriers or similar motorized devices in any part of the competition site, including the paddocks, is prohibited.

D11.8 Starting
D11.8.1 Push starts are prohibited.

D11.8.2 The use of auxiliary batteries is prohibited once a car has moved to the starting line of any event.

D11.9 Footwear
Everyone in a “dynamic” area (an area where cars can be moving under their own power) must wear closed-toed shoes.
ARTICLE 12: PROTESTS

D12.1 Required Review - Any team that intends to protest a rule, score, judge’s decision or any other aspect of the competition, must present the issue to SAE staff for discussion, and possible resolution before the protest is filed.

D12.2 Cause for Protest - A team may protest any rule interpretation, score or official action (unless specifically excluded from protest) which they feel has caused some actual, non-trivial, harm to their team, or has had a substantive effect on their score. Teams may not protest rule interpretations or actions that have not caused them any substantive damage.

D12.3 Protest Period - Protests must be filed within one-half (½) hour after the action being protested has occurred or the scores for the activity involving the protest subject are posted.

D12.4 Protest Format - Protests must be in writing and submitted to designated organizer or SAE staff.

D12.5 Protest Bond - The protesting team must post a twenty-five (25) point bond to be deducted from their score if the protest is denied.

D12.6 Decision - The decision of the officials regarding any protest is final.

ARTICLE 13: PIT RULES

D13.1 Vehicle Movement
D13.1.1 Vehicles may not move under their own power anywhere but on the practice or competition tracks, or as otherwise directed by the organizers.

D13.1.2 Off track vehicles must be pushed at a normal walking pace by means of a “Push Bar”, with all four (4) wheels on the ground, a team member sitting in the cockpit to steer and brake and with another team member walking beside the car.

D13.1.3 Cars with wings are required to have two team members walking on either side of the vehicle whenever the vehicle is being pushed.

D13.1.4 During performance events when the excitement is high, it is particularly important that the car be moved at a slow pace in the pits.

D13.1.5 The walking rule will be enforced and a point penalty of twenty five (25) points will be assessed for each violation.

D13.2 Push Bar
D13.2.1 Each car must have a removable device that attaches to the rear of the car that allows two (2) people, standing erect behind the vehicle, to push the car around the event site.

D13.2.2 This device must also be capable of decelerating, i.e. slowing and stopping the forward motion of the vehicle and pulling it rearwards. It must be presented with the car at Technical Inspection.

D13.3 Smoking – Prohibited
Smoking is prohibited in all competition areas.
D13.4 Fueling and Refueling
Officials must conduct all fueling and refueling.

D13.5 Engine and Vehicle Running Requirements
Engines may be run in the paddock provided the car has passed Parts 1 and 2 of Technical Inspection (C.2.7) and the following conditions are satisfied:

a. The car is on sturdy and adequate stand, and
b. The drive wheels are at least 10.2 cm (4 in) off the ground, or the driver wheels have been removed.

ARTICLE 14: DRIVING RULES

D14.1 Driving Under Power
D14.1.1 Cars may only be driven under power (a) when running in an event, (b) on the practice track and (c) during brake test or (d) during any powered vehicle movement specified and authorized by the organizers.

D14.1.2 For all other movements cars must be pushed at a normal walking pace using a push bar.

D14.1.3 Driving a vehicle outside of scheduled events or scheduled practice will result in a two hundred (200) point penalty for the first violation and disqualification for a second violation.

D14.2 Driving Off-site
Driving off-site is absolutely prohibited. Teams found to have driven their vehicle at an off-site location during the period of the competition will be excluded from the competition.

D14.3 Practice Track
D14.3.1 A practice track for testing and tuning cars may be available at the discretion of the organizers. The practice area will be controlled and may only be used during the scheduled practice times.

D14.3.2 Practice or testing at any location other than the practice track is absolutely forbidden.

D14.3.3 Cars using the practice track must have all parts of the technical inspection sticker.

D14.4 Situational Awareness
Drivers must maintain a high state of situational awareness at all times and be ready to respond to the track conditions and incidents. Flag signals and hand signals from course marshals and officials must be immediately obeyed.

ARTICLE 15: DEFINITIONS

D15.1 DOO - A cone is “Down or Out”—if the cone has been knocked over or the entire base of the cone lies outside the box marked around the cone in its undisturbed position.

D15.2 DNF - Did Not Finish

D15.3 Gate - The path between two cones through which the car must pass. Two cones, one on each side of the course define a gate: Two sequential cones in a slalom define a gate.
D15.3.1 Entry Gate - The path marked by cones which establishes the required path the vehicle must take to enter the course.

D15.3.2 Exit Gate - The path marked by cones which establishes the required path the vehicle must take to exit the course.

D15.4 Staging Area - An area prior to the entry to an event for the purpose of gathering those cars that are about to start.

D15.5 OC - A car is Off Course if it does not pass through a gate in the required direction.
